His _____ speaking style notwithstanding, William Perkins has long been seen as the moderate face of his political party.

○**A** genteel
○**B** mundane
○**C** affable
○**D** captivating
○**E** vehement

해설
단서: notwithstanding(~에도 불구하고) → 대조.
그는 당의 '온건한(moderate)' 얼굴로 여겨졌다 → 빈칸은 온건함과 반대되는 말투.
빈칸 = 격렬한, 과격한.
정답: E (vehement)

⚠ **함정 / 오답 포인트**
genteel/affable은 온건함과 같은 방향이라 notwithstanding 대조가 성립하지 않는다. captivating은 온건함과 대립하지 않는다.

단어
genteel 품위 있는, 점잖은 · **affable** 상냥한, 붙임성 있는 · **vehement** 격렬한, 열정적인 · **mundane** 평범한, 재미없는 · **captivating** 매혹적인

Blank (i)	Blank (ii)
overwrought panegyrics	objectionable
lowly calumnies	confusing
justified fulminations	unexciting

해설
(i) 'decidedly prejudiced press'(명백히 편향된 언론)로부터 상관을 방어 → 언론이 하는 것은 부당한 비방 → lowly calumnies.
(ii) 방어하려면 자신이 그렇게 '불쾌하다/부당하다'고 여기는 보도 사례를 제시해야 → objectionable.
정답: B (lowly calumnies), D (objectionable)

⚠ **함정 / 오답 포인트**
justified fulminations는 '비난'이라는 의미는 맞지만 justified(정당한)가 대변인의 관점(prejudiced press)과 모순.
overwrought panegyrics는 찬사라서 방어할 필요가 없다.

단어
panegyrics 찬사 · **overwrought panegyrics** 과도한 찬사 · **lowly calumnies** 저열한 비방 · **justified fulminations** 정당한 맹비난 · **objectionable** 불쾌한, 못마땅한 · **confusing** 혼란스러운 · **unexciting** 흥미 없는

해설

콜론(:) 뒤가 (i)을 설명: 대부분 연구는 (ii), although (iii) → 서로 엇갈리는 결과.

(ii) although 대조 + (iii) 뒤 'thus boost the total comic appeal' → (ii)는 전체 유머 인식에 효과 없다 → has little effect on.

(iii) 특정 지점에서 유머를 높여 전체 매력을 boost → enhance.

(i) 효과 없다는 연구와 높인다는 결과가 공존 → 웃음의 힘은 불분명하다 → unclear.

정답: C (unclear), F (has little effect on), H (enhance)

⚠ **함정 / 오답 포인트**

(ii) tends to accentuate를 고르면 although 뒤와 대조가 사라진다. (i) measurable은 '측정 가능'이라 그럴듯하지만 결과가 엇갈린다는 콜론 뒤 내용과 맞지 않는다.

단어

Calculating hydroelectric plants' environmental impact is not simple. Dam building requires steel and cement, the manufacture of which entails greenhouse gas emissions. Estimates for these emissions are relatively straightforward to make and show that the consequences are small compared to the benefits of generating greenhouse gas-free hydroelectric power. But more difficult-to-estimate greenhouse gas contributions occur during the plants' operation. The submerging of large areas behind dams results in the microbial decomposition of vegetation, which produces substantial quantities of methane—a potent greenhouse gas. Furthermore, eradicating vegetation eliminates the consumption of the greenhouse gas CO_2 by that vegetation. Estimating amounts of these gases is difficult, and amounts vary depending upon the specific location, terrain, and power intensity of the dam with its associated lake.

The author would most likely agree with which of the following assertions about the environmental impact of hydroelectric power plants?

○**A** It cannot be inferred from calculations of the environmental impact of a few hydroelectric plants.

○**B** It is not primarily determined by the effects of dam building on vegetation.

○**C** It cannot be calculated with sufficient accuracy to justify the requirement of environmental impact studies prior to plant construction.

○**D** It could be significantly improved if the amounts of steel and cement used for dam building could be decreased.

○**E** It is too substantial, when all factors are considered, to justify the building of new dams.

- ☐ **A** stratified
- ☐ **B** destabilized
- ☐ **C** weakened
- ☐ **D** liquefied
- ☐ **E** differentiated
- ☐ **F** distinguished

해설
단서: 녹은 뒤 'with the heavier Fe-Ni material forming the core and the silicates forming the crust' → 무거운 것은 핵, 가벼운 것은 지각으로 '층이 나뉨'.
빈칸 = 층상으로 분리된.
stratified(층을 이룬)와 differentiated(분화된, 지질학에서 층으로 분리된)가 짝.
정답: A (stratified), E (differentiated)

⚠ **함정 / 오답 포인트**
liquefied는 'melted'에 끌린 오답. 빈칸은 녹은 '결과'로 핵-지각 구조가 생긴 상태다. distinguished는 '구별된/저명한'으로 differentiated와 비슷해 보이지만 층 분리 의미가 없다.

단어
differentiated 분화된(층으로 분리된) · **stratified** 층을 이룬, 계층화된 · **destabilized** 불안정해진 · **weakened** 약해진 · **liquefied** 액화된 · **distinguished** 구별된, 저명한

Historically, more cold-adapted antelope species originating in Eurasia have migrated into Africa, where the climate is generally warmer, than have warm-adapted African species into Eurasia. A likely explanation for this involves the fact that intercontinental migrations require both a land bridge connecting the two continents and the suitable habitat both on and across that land bridge. During periods of climatic cooling, such as the various ice ages, the land bridge is open for a long time (because sea level remains low) and is usable by cold-adapted species because cool habitats then extend across it. Thus, during cooling most migrants would be expected to travel toward Africa, which is near the equator, since this is the direction dictated by habitat changes on a cooling Earth. In contrast, when the Earth is warm, the land bridge is reduced or gone because sea level is relatively high then. Only during the short lag between onset of global temperature change and sea level response can warm-adapted species migrate from the equator toward higher latitudes.

○**C** Under most climatic conditions, Africa offers a larger number of suitable antelope habitats than does Eurasia.

○**D** Many more species of antelope have originated in Eurasia than have originated in Africa.

○**E** Land bridges are more likely to exist when climate change favors migration to warmer climates than when climate change favors migration to cooler climates.

Conspicuous structural inconsistencies distinguish Xenophon's《Ephesiaka》from other ancient Greek novels. Its narrative texture is uneven, the story's pace varies erratically, and, compared with other novels, it is inferior in composition. The quality of the《Ephesiaka》was first questioned by Burger, who maintained that much of the work is an epitome (i.e., a summary). This idea was used to account for the work's narrative shortcomings: the choppy pace, the lack of motivation for certain events, the abrupt introduction of characters. However, it is doubtful that《Ephesiaka》is an epitome because, as an epitome, it is a worse job than it is as a novel. Even in passages Burger thinks to be epitomized, inconsequential details such as Anthia feeding her dogs are retained, but potentially significant actions of gods are excised.

Archaeologists in Australia have never found sites where large extinct animals were killed, and it seems likely that many species of megafauna had become extinct prior to the arrival of humans. This might mean that there was minimal coexistence between humans and megafauna; yet there are sites that may well display temporal overlap, such as Cuddie Springs. If humans exploited megafauna, then why are there no kill sites? While Flannery (1990) argued that the rapid speed of the extermination may be responsible, it is more likely that lack of preservation of material dating to more than 40,000 years ago is responsible. Nevertheless, environmental signatures consistently point to the reduction in range and density of large animals, if not their final extinction, between 40,000 and 50,000 years ago, coincident with the arrival of people, and so the appearance of human hunters in the landscape is implicated in the extinction process. The timing of extinction trends in these mega-animals coincides with intensification of long-term continental drying, reductions in resource levels, and restructuring of the environment, and so even low levels of predation by the new human hunters may have tipped some species into terminal declines or accelerated declines already underway. Most likely, it was not intensive or exclusive hunting of these large animals that reduced their populations perilously, but merely the addition of a new social carnivore to stressful ecological circumstances.

The highlighted sentence serves to

○**A** offer a possible explanation for why archaeologists have never found evidence of megafaunal killings in Australia

○**B** substantiate the belief that the demise of Australian megafauna was inevitable with the arrival of humans

○**C** provide evidence of how human hunters expedited the rate of the extinction of Australian megafauna

○**D** document that archaeologists had drastically overestimated the assumed ranges of Australian megafauna

○**E** suggest that the megafaunal extinction in Australia coincided with megafaunal extinctions in other locations

Many Namibian farmers raise cattle on farmland that is part of a cheetah's territory. Cheetahs are solitary hunters that hunt in and defend exclusive territories. For decades the farmers have been trapping and killing cheetahs on their land but have found that the frequency with which cheetahs are trapped has not decreased during this period. The Namibian cheetah population, therefore, must not have suffered any significant reduction as a result of the farmers' practice.

Experiments and field observations show that in a Mediterranean plant community, drought has a counterintuitively positive effect on shrub seedling establishment. Due to decreased competition by annuals, droughts increase opportunities for shrub seedlings. Under nondrought conditions, annuals competed with shrub seedlings more effectively, confirming the experimenters' assumption that annuals benefit more than shrub seedlings from an increase in water availability. This may be attributed to their faster or more efficient uptake of soil resources. Similar patterns can be observed in other semi-arid communities. Jurena and Archer showed for a savanna community that root biomass of grasses increased in wetter conditions, decreasing grassland susceptibility to encroachment by shrub seedlings.

The author of the passage would most likely agree with which of the following statements about the growth of shrub seedlings?

○**A** In naturally occurring conditions, water availability is positively correlated with seedling growth.

○**B** In semi-arid climates, wetter than normal conditions have no appreciable effect on seedling growth.

○**C** When seedlings are grown in isolation, water restriction will not positively affect their growth.

○**D** Where there is competition among annual plants, shrub seedling growth will benefit from increased rainfall.

○**E** Where annual plants are well established, drought will have a negative elect on shrub seedling growth.
