While Zora Neale Hurston never avowed an affiliation with surrealism, an artistic movement celebrating the unconscious mind's creative power, French surrealist Guy Ducornet's citing her as an inspiration seems quite _____ given Hurston's intensely imaginative work.

○**A** tenable
○**B** arcane
○**C** audacious
○**D** prescient
○**E** eccentric

해설
While: 허스턴은 초현실주의와의 관계를 공언한 적이 없지만 → 그래도 뒤 내용은 긍정.
given 'Hurston's intensely imaginative work' → 무의식의 창조력을 찬양하는 초현실주의자가 그녀를 영감의 원천으로 든 것은 '타당하다'.
빈칸 = 긍정, '납득할 만한' → tenable.
정답: A (tenable)

Some studies have shown that red-backed salamanders (RBS) are scarce in areas with acidic soils and that those present in such conditions have smaller-than-average bodies. Explanations have included the possibility that young RBS are adversely affected by acidic soil, that adult RBS can sense and may avoid acidic soil conditions, or that loss of RBS prey populations due to acidic soil could result in reduced RBS populations. Yet researchers found fairly high densities of large-bodied RBS at Lake Claire Watershed, where soil conditions are acidic. One hypothesis is that intraspecific geographical variation in acidity tolerance (i.e., local adaptation to an acidic environment) could exist for RBS. Previous studies showed potential local adaptation of some salamander species to acidity.

Many theorists now doubt that heat loss from Earth's core and radioactive decay are sufficient by themselves to produce all the energy driving the tectonic plates whose movements have helped shape Earth's surface. This leaves a loose end in current geological theory. Herbert Shaw argues that because scientists have underestimated the input of substantial amounts of energy from extraterrestrial impactors (asteroids and comets striking Earth), they have difficulty accounting for the difference between the quantity of energy produced from sources intrinsic to Earth and that involved in plate tectonics. Whereas most geologists have treated the addition of energy through the bombardment of Earth's surface by such impactors as a process separate and independent from the movement of Earth's tectonic plates, Shaw asserts that these processes are indivisible. Shaw's revolutionary "open-system" view recognizes a continuum between terrestrial and extraterrestrial dynamics, whereas modern plate tectonic theory, like the classical geology developed during the nineteenth century, is founded on the view that Earth's geological features have changed through gradual, regular processes intrinsic to Earth, without reference to unique catastrophic events. Classical geology borrowed a decisive, if unspoken, premise from Newton—the independence of Earth's processes from any astronomical context.

We take it for granted that island populations must have a continental origin, and not the other way around. The number of islands that acquire their biota [i.e., plant and animal life] from a larger source supports this notion. There is, however, no fundamental mechanism in the equilibrium theory of island biogeography to preclude island species from colonizing the mainland. The belief in one-way biogeographic traffic has only begun to erode as phylogenetic analyses have revealed island origins for continental rodents and lizards. Among plants, the genus Exostema has successfully diversified in the continental Neotropics, while two populations in the angiosperm genus Erithalis have colonized Florida. In 2018, the U.S. Congress passed the "45Q legislation," which significantly increases corporate tax credits for various uses of CO_2 (carbon dioxide). The most controversial use is "enhanced oil recovery." An oil company purchases CO_2, transports it by pipeline and injects it into depleted oil wells, pushing out extra oil it could not extract by conventional means. A climate change solution that entails producing more fossil fuels may sound Orwellian, and some environmental critics have attacked 45Q as just another fossil-fuel subsidy program in disguise. But enhanced oil recovery appears to reduce current emissions because the CO_2 typically captured from natural gas or ethanol refineries gets sequestered underground. Some environmentalists, such as Kurt Waltzer of the Clean Air Task Force, argue that turning carbon capture into an energy technology rather than an emission technology is the first step toward broad commercial adoption of CO_2 removal. It turns recaptured CO_2 into a product to be bought or sold rather than simply a cost to be endured.

The passage suggests that Kurt Waltzer would likely agree with which of the following statements about the 45Q legislation?

○**A** It will likely replace some of the fossil-fuel subsidy programs that are currently in effect.

○**B** It is likely to impede the development of economically efficient ways of recapturing CO_2 for sequestration.

○**C** The positive effects of other portions of the legislation will likely outweigh the environmental harm caused by its controversial aspects.

○**D** The incentives it provides for the production of more fossil fuel are an ineffective means of reducing the production of CO_2 byproducts.

○**E** Its provision of corporate tax credits for using CO_2 for enhanced oil recovery may offer a net gain in environmental terms.

해설
근거: Waltzer는 탄소 포집을 '에너지 기술'로 만드는 것이 CO_2 제거의 광범위한 상업적 채택을 향한 'first step'이라고 본다.
또 바로 앞 문장: enhanced oil recovery가 CO_2를 지하에 격리해 현재 배출을 줄이는 듯하다.

Restoring the old practice of producing fish in rice fields does not just make environmental and economic sense; it has the added advantage that it _____ benefits the very poor.

- ☐ **A** abnormally
- ☐ **B** predominantly
- ☐ **C** eminently
- ☐ **D** moderately
- ☐ **E** particularly
- ☐ **F** unnaturally

does not just ... ; it has the added advantage: 환경·경제적 이점에 더해 '특히' 극빈층에게 이익이 된다.
빈칸 = 강조 부사 '특히, 두드러지게'.
eminently(두드러지게, 매우)와 particularly(특히)가 짝.
정답: C (eminently), E (particularly)

⚠ **함정 / 오답 포인트**
predominantly(주로)는 단독으로 자연스럽지만 짝이 없다(이익이 '주로' 빈곤층에만 간다는 뜻이 됨).
abnormally/unnaturally는 짝이지만 부정적이라 'advantage'와 맞지 않는다.

단어
rice fields 논 · **eminently** 두드러지게, 매우 · **abnormally** 비정상적으로 · **predominantly** 주로, 대부분 · **moderately** 적당히 · **particularly** 특히 · **unnaturally** 부자연스럽게

A law has been proposed requiring the cargo boxes of trucks carrying gravel to be covered by a tarpaulin, because vehicles driving close behind open-topped gravel trucks can be damaged by gravel flying off these trucks. The law is unlikely to substantially reduce such damage, however: flying gravel is much less likely to come from the cargo box itself than from the grooves of the tires, in which gravel can become wedged during loading.

S2-13 정답: A CR 난이도 ●●●●○ verbal28 Q11

Select one answer choice.

Which of the following, if true, provides the strongest support for the argument given?

○**A** The drivers of vehicles behind a gravel truck are more likely to remain close behind the truck if the trucks cargo box is covered than if it is uncovered.

○**B** Most trucks that carry gravel already carry tarpaulins that their drivers use to cover the cargo box when they are carrying sand, which can blow out of the cargo box in significant quantities.

○**C** Of all the damage that occurs to vehicles on the highway, debris that flies off trucks is the cause of only a very small fraction.

○**D** The proposed law allows open-topped trucks on the highway to have uncovered cargo boxes whenever their cargo boxes are empty.

○**E** Because of the great weight of a load of gravel, the driver of a gravel truck is often driving much more slowly than most of the other vehicles on the road.

One reason researchers have long believed that Mars never enjoyed an extensive period of warm and wet climate is that much of the surface not covered by wind-borne dust appears to be composed of unweathered material. If water flowed for an extended period, researchers reasoned, it should have altered and weathered the volcanic minerals, creating clays or other oxidized, hydrated phases (minerals that incorporate water molecules in their crystal structure).

It turns out, though, that the scientists were not looking closely enough. New high resolution mapping data and close-up surface studies have revealed clays and other hydrated minerals in many regions. The clay deposits are scattered all over, in ancient volcanic surfaces and heavily cratered highland regions, some of which have apparently been exposed by erosion only recently.

○**A** A new method to analyze volcanic craters created on the Martian surface

○**B** An improved ability to detect hydrated materials on the Martian surface

○**C** A more sophisticated understanding of the effect of wind-borne dust on the Martian surface

○**D** A decision to look for water primarily in heavily cratered highland regions

It can be inferred from the passage that the author would agree with which of the following statements regarding the reasoning discussed in the highlighted sentence?

☐**A** It provides the basis for an explanation of why water on Mars has been difficult to find until recently.

☐**B** It correctly identifies a consequence of water flowing on the Martian surface.

☐**C** It depends on a false assumption about how water and volcanic materials interact on Mars.
