One of the reasons why many early British colonies in North America failed amid the New World's abundance was that the settlers' mindset prevented them from living like the native inhabitants. From Native Americans, the settlers learned such skills as building brushwood weirs to trap fish, but they did not adopt the real key to success: mobility. The whole intellectual foundation of European civilization was fixity—a worldview profoundly different from that of Native Americans, who moved in response to changing food resources. Settlers were drawn to North America by tales of its extraordinary abundance, not realizing that abundance is seasonal. Culture and ecological knowledge allowed Native Americans to exploit different food sources at different time of year.

Consider each of the choices separately and select all that apply.

The author suggests which of the following about the early British colonies in North America that failed?

☐ **A** Their inhabitants' worldview was deeply affected with native people and practices.

☐ **B** Their inhabitants experienced critical food shortages in part because their culture hindered their ability to exploit seasonally available resources.

☐ **C** Their longevity would have been greater had the inhabitants adopted more of the fishing technologies used by Native Americans.

해설

근거: 'the settlers' mindset prevented them from living like the native inhabitants', 'abundance is seasonal', 원주민은 계절마다 다른 식량원을 이용.

B: 실패한 식민지 주민들은 문화(고정성, fixity) 때문에 계절별 자원을 이용하지 못해 식량 부족을 겪었다 → 'failed amid abundance' + mindset + seasonal의 결합으로 지지됨.

A: 정착민의 세계관은 원주민과 '근본적으로 달랐다(profoundly different)' → 반대.

C: 어업 기술(weirs)은 이미 배웠고, 핵심은 기술이 아니라 mobility였다 → 지지 안 됨.

The area of literary rights is confusing for scholars whose work focuses on collaborative materials, particularly materials of earlier Native American writers. Questions arise over authorship and the determination of literary heirs. For example, recognition of heirs turns on the European-based assumption of the private ownership of a written statement. The first person to write down an oral tale can become legally recognized as the owner of that version of the story, just as the first chemist to patent a tribal healing practice becomes the owner of the resulting chemical formula. This insistance on private rather than collective ownership, derived from the nineteenth-century notion of the autonomous, creative, authorial voice, flies in the face of those who come from an oral tradition. Thus, a scholar concerned with finding literary heirs in order to afford them the benefits of copyright laws must in so doing accede to legal concept of ownership that has been used to appropriate knowledge from community-based cultures.

A review of the chemical composition of Sierra Nevada mountain spring waters in 1964 revealed surprising differences in concentrations of total dissolved solids (TDS) among springs. Given the relatively uniform composition of the granite through which all the water flowed, review authors had expected more uniformity in the mineral content. They noted, however, that some of the springs were ephemeral, flowing only in springtime, while others were perennial. Though the two kinds of springs contained similar proportions of dissolved calcium, magnesium, sodium, bicarbonate, sulfate, and chloride, TDS levels in perennial springs were about twice those in ephemeral springs. Perennial springs' waters circulate more deeply into the earth and have a longer residence time than those of ephemeral springs, reacting more completely with granitic rocks.

In her study of New Haven, Connecticut, covering the period 1639-1789, Cornelia Dayton argues that during the seventeenth century, colonial women had easy access to New Haven's courts, where their concerns and complaints were taken seriously by Puritan magistrates. These magistrates deviated from English legal practice by eschewing lawyers and simplifying procedures, thereby allowing, even encouraging, women's participation in litigation.

But by the early eighteenth century, Dayton contends New Haven's courts, like those of other British colonial areas, were reverting to English legal procedures, engaging lawyers to argue cases, and focusing more on property issues. These changes resulted primarily from an expanding economy that brought about new forms of credit, vastly augmented indebtedness, contact with nonlocal markets, and sharper class and racial distinctions. These factors worked to marginalize colonia women's economic contributions to their families and to diminish their influence in their communities and their usefulness to judges and juries in what Dayton calls the "litigated economy." In this "anglicized legal environment," patriarchal authority became more deeply entrenched, the spheres of public and private activity were restructured, and colonial women became less visible participants in a legal arena that now catered primarily to colonial men's interests.

It can be inferred from the passage that New Haven's courts in the seventeenth century differed from New Haven's courts in the eighteenth century in which of the following ways?

○**A** In the seventeenth century, the procedures and practices of New Haven's courts were sharply divergent from those of other British colonial areas.

Most of the studies of the effect of aging on short-term memory have led researchers to conclude that younger adults perform short-term-memory tasks better than people over the age of 65. But these studies were all conducted in afternoon sessions. The younger participants did not, however, perform any better in the morning

○**C** There is no significant overall difference in long-term memory between older adults and younger adults.

○**D** The results of most previous studies of the effect of aging on short-term memory are best interpreted as showing that age has no effect on the ability to perform short-term-memory tasks.

○**E** Younger adults are able to perform short-term-memory tasks better if they perform them in the afternoon than if they perform them in the morning.

Despite today's more efficient electrical generators, modern electric-only power plants waste more of their fuel sources' potential energy than did Thomas Edison's power plants of the late 1800s. Edison used cast-off steam from his generators to warm nearby homes and factories. But few modern power plants use this residual heat, instead venting it into the air. When newer, larger plants required more real estate, they were built farther from customers. Moreover, because electricity travels easily, plants were located wherever they could tap the energy of a river or where local coal was especially cheap. The heat generated during the production of electricity does not travel far, however, so when power plants moved out to the horizon, the steam went to waste.

○**D** required much larger plants than those currently operating
