Section 1 12 Questions · 18 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

Age data from meteorites suggests that, in contrast to the relatively _____ pace of planetary evolution we are witnessing today, the first ten million years or so of our solar system history were extremely eventful.

- ○**A** structured
- ○**B** uncertain
- ○**C** pedestrian
- ○**D** productive
- ○**E** menacing

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

The guilty-pleasure of the play lies in its invitation for us to identify with its characters attractive, articulate young women and young men, and to (i) _____ their behavior that, from the outside, may look more than a little (ii) _____: though these actions are initially repugnant, we cannot help but share the point of the view of the characters committing them.

Blank (i)	Blank (ii)
lament	trivial
execrate	turbulent
rationalize	monstrous

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

The general claim that artists are the preeminent specialists in (i) _____ is refuted by the obvious fact that the great mathematical and scientific discoveries of the past and present have been as much the result of (ii) _____ thinking as have great (iii) _____ discoveries.

Blank (i)	Blank (ii)	Blank (iii)
revelation	original	historical
creativity	anachronistic	empirical
symbolization	systematic	artistic

Questions 4 to 5 are based on the following passage.

Critical neglect of Emily Bronte's poetry is long-standing and once resulted from an idea of Victorian poetry as essentially a male preserve. Feminist critics have challenged this understanding of Victorian poetry largely by displacing critical approaches that required a particular subject matter or point of view and therefore undervalued women poets whose work did not conform. But feminist critics' own assumptions about Victorian women's poetry have also threatened to exclude Emily Bronte. Virginia Blain's anthology of Victorian women's poetry is representative, not eccentric, in omitting Bronte. Blain aimed to provide wide-ranging coverage of "the kinds of subjects and poetic treatments most often employed by Victorian women poets." Yet, as Emily's sister Charlotte said, Emily's poetry is not "at all like the poetry women generally write."

Question 4 RC

(Highlighted portion: "Emily's sister Charlotte said")

Select one answer choice.

The reference to what "Emily's sister Charlotte said" serves primarily to

○**A** illustrate an attitude toward Victorian poetry that has been common among feminist critics

○**B** provide a vindication for those scholars who have given critical attention to Emily Bronte's poetry

○**C** suggest that Emily Bront's poetry would not be well served by being included in an anthology of poetry by women

○**D** identify an aspect of Emily Bronte's poetry that is increasingly of interest to literary critics

○**E** shed light on a particular oversight common among feminist critics studying Victorian poetry

Question 5 RC

(Highlighted portion: "Virginia Blain's anthology")

Select one answer choice.

The author mentions "Virginia Blain's anthology" primarily in order to

○**A** represent a voice opposing the feminist critics mentioned in the second sentence

○**B** elaborate on a claim made in the third sentence

○**C** provide an example of an omission decried by feminist critics

○**D** cite a tendency that preceded the advent of feminist criticism

○**E** note an exception to a tendency described earlier in the passage

Question 6 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

To say that John Adams was forthright was to be _____; friends as well as enemies were more likely to characterize his stark honesty and direct manner as blunt and awkward.

☐**A** fickle

☐**B** charitable

☐**C** facetious

☐**D** unreasonable

☐**E** forbearing

☐**F** capricious

Question 7 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

We might be much closer to building the next generation of observatories if competing groups of astronomers had not _____ repeated chances to collaborate; instead, three separate projects with common goals are fighting one another for funding.

- ☐ **A** spurned
- ☐ **B** avoided
- ☐ **C** sabotaged
- ☐ **D** rebuffed
- ☐ **E** initiated
- ☐ **F** commenced

Question 8 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The manufacturing company's swift maneuver enabled it to evade the full impact of the increasing cost of raw materials, which brought the downfall of firms that responded less _____.

- ☐ **A** ruthlessly
- ☐ **B** deftly
- ☐ **C** adroitly
- ☐ **D** carefully
- ☐ **E** extravagantly
- ☐ **F** cautiously

Question 9 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Caricature can be revealing as well as amusing, and Ager's novel is both: Ager's delineation of class, ethnic, and generational struggle is exaggerated for comical effect, but it _____ nonetheless.

- ☐ **A** resonates
- ☐ **B** entertains
- ☐ **C** diverts
- ☐ **D** confuses
- ☐ **E** rings true
- ☐ **F** falls short

Questions 10 to 12 are based on the following passage.

Mercury, the planet closest to the Sun, is not much bigger than Earth's moon, yet its density is typical of that of a far larger planet. Since the density of terrestrial (nongaseous) planets increases with depth, they have high-density cores, probably composed largely of iron. Mercury's high density suggests that it may have the largest metallic core relative to its size of all the terrestrial planets. Astronomers believe that all the planets condensed from the solar nebula at about the same time, so why would Mercury have such an anomalous density? The composition of the solar nebula might have been dramatically different in the vicinity of Mercury's orbit—much more so than theoretical models would predict. Or the Sun may have been so energetic early in the life of the solar system that the more volatile, low-density elements on Mercury were vaporized and driven off by the Sun's heat. It is also possible that a massive object collided with Mercury soon after its formation, vaporizing the less dense material.

Question 10 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** speculate on the composition of Mercury's core

○**B** point out a difference between Mercury and gaseous planets

○**C** present possible explanations for Mercury's unusual density

○**D** critique an argument concerning Mercury's formation

○**E** answer a question about Mercury's history

Question 11 RC 복수

Consider each of the choices separately and select all that apply.

The passage supports which of the following statements about Mercury?

☐**A** Its density is atypical for a terrestrial planet of its size.

☐**B** Its core is probably composed mainly of iron.

☐**C** Its composition includes a high percentage of volatile, low-density elements.

Question 12 RC

Select one answer choice.

Which of the following best describes the function of the highlighted sentence in the context of the passage as a whole?

○**A** It offers a possible explanation for a puzzling fact about the planet Mercury.

○**B** It presents evidence that counters a claim made in the previous sentence.

○**C** It describes an outmoded idea about the nature of the solar nebula.

○**D** It articulates the central scientific issue that is under discussion in the passage.

○**E** It suggests that astronomers are in disagreement about certain crucial facts concerning planet formation.

Section 2 15 Questions · 23 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

A core assumption of evolutionary biology is that adaptation is always _____: organisms adapt to their environment, never vice versa.

- ○**A** beneficial
- ○**B** gradual
- ○**C** reversible
- ○**D** contingent
- ○**E** asymmetrical

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

Svitlana Mayboroda's recent work, though (i) _____ pure mathematics, is already being (ii) _____ by physicists, distinguishing it from most mathematical advances, for which the development of any practical use is long delayed.

Blank (i)	Blank (ii)
largely irrelevant to	applied
familiar to scholars of	overlooked
in the realm of	questioned

Question 3 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

Whereas in earlier kinds of writing about manners, such as conduct books, advice about behavior was (i) _____ an eternal and autonomous ethical ideal, the early-nineteenth-century etiquette book based its precepts on more (ii) _____ norms: as do ever-shifting fashion trends, etiquette's imperatives rose and fell routinely.

Blank (i)	Blank (ii)
substituted for	clearly defensible
subordinated to	broadly acceptable
distinguished from	socially contingent

Question 4 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

The theater presented directors and designers with a remarkably (i) _____ space, since the placement of the stage and of the audience could be (ii) _____ the needs of the production. And though audiences were sometimes unsettled when they found themselves thrust into the midst of the action, on balance they saw this as adding to the (iii) _____ of the performance.

Blank (i)	Blank (ii)	Blank (iii)
plastic	irrelevant to	deficiencies
compact	preferred over	remoteness
recalcitrant	dictated by	excitement

Questions 5 to 6 are based on the following passage.

The label “memoir” has been attached by authors and publishers to quite different kinds of writing over the past two centuries. Julie Rak’s genealogy of the term in her article "Are Memoirs Autobiography?' highlights the term’s radical instability, pointing out that "memoir" has been used to refer both to first- and to third-person narrative; to private and public, unofficial and official, life writing. Notably, literary critics have often conceived “memoir” as a subgenre of “autobiography” and while the basis for this distinction has been somewhat inconstant, the distinction itself has not: “memoir” has been devalued as a minor and subliterary form while "autobiography” has literary status. Recently, however, as interest in memoirs has grown, writers and publishers have outflanked critics: “memoir” is now the prestige term.

Question 5 RC

Select one answer choice.

The primary purpose of the passage is to

- ○**A** identify the origins of a particular distinction
- ○**B** describe how the definition of a literary term has changed
- ○**C** correct a misunderstanding about a literary genre
- ○**D** evaluate competing definitions of a particular kind of writing
- ○**E** account for a recent change in literary preferences

Question 6 RC

(Highlighted portion: “Julie Rak’s genealogy of the term in her article”)

Select one answer choice.

The author mentions the “article” primarily to

- ○**A** show how a particular distinction has become blurred
- ○**B** cite an argument that challenges a widespread view
- ○**C** demonstrate that a change has occurred over time
- ○**D** note an example of a scholarly controversy
- ○**E** illustrate a claim about a particular term

Questions 7 to 9 are based on the following passage.

Ecologists had assumed that trees in the consistently warm tropics grew at a slow but steady rate, unvarying from year to year. However, a study at La Selva, Costa Rica, showed that trees grew less in hotter years and more in cooler ones: between 1984 and 2000, dramatic differences occurred in the six species of trees studies, with trees adding twice as much wood in some cooler years as they did in the scorching El Nino year of 1997-1998. Because tree growth is an index of the balance between photosynthesis, in which trees absorb carbon dioxide (CO_2) from the atmosphere and release oxygen, and respiration, in which the opposite occurs, the La Selva data were the first hint that rapidly rising global temperatures, driven by human-generated emissions of CO_2, may be pushing tropical forests to release more CO_2, thereby intensifying global warming. This raised serious questions about a popular theory that tropical forests act as a sponge, soaking up much of the excess CO_2 that humans pump into the atmosphere. The La Selva data are consistent with a model of global CO_2 flux developed by Keeling, who concluded that the amount of CO_2 taken up in tropical landmasses rose in cooler years and fell in hotter ones, accounting for year-to-year changes in the amount of CO_2 that stays in the atmosphere.

Question 7 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** present additional evidence to support a popular theory

○**B** show the underlying similarities of two seemingly contradictory theories

○**C** point out the implications of a particular study for two related theories

○**D** provide an alternative explanation for a well-documented phenomenon

○**E** reconcile two competing theories that explain a phenomenon

Question 8 RC

Select one answer choice.

The passage supports which of the following statements about the trees in the La Selva study?

○**A** During the El Nino year, they added considerably less wood than they did in cooler years during the period of 1984-2000.

○**B** During the El Nino year, they typically had higher rates of photosynthesis than they did in other years during the period of 1984-2000.

○**C** During the El Nino year, they released considerably more oxygen than they did in cooler years during the period of 1984-2000.

○**D** During the El Nino year, they took up considerably more CO_2 than they did in cooler years during the period of 1984-2000.

○**E** The amount of CO_2 that they absorbed remained constant throughout the entire period of 1984-2000.

Question 9 RC

Select one answer choice.

The passage suggests that as temperatures rise, trees in the tropical regions

○**A** continue to grow at a slow but steady rate

○**B** grow less and intensify photosynthesis

○**C** emit more CO_2 and oxygen

○**D** increase overall respiration and decrease overall photosynthesis

○**E** grow more and absorb more CO_2

Question 10 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

As a way of _____ the negative impacts of overdependence on a single export product—crude oil—the Nigerian government passed legislation in 1999 intended to revitalize the moribund solid minerals' sector.

☐**A** assuming

☐**B** checking

☐**C** disguising

☐**D** stemming

☐**E** downplaying

☐**F** shouldering

Question 11 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

When first introduced, cubicle workspaces were seen as having _____ effect on office workers, but as cubicle sizes steadily shrank, the aspirations of the people working in them became increasingly constrained.

☐**A** a revitalizing

☐**B** a soothing

☐**C** a liberating

☐**D** a protecting

☐**E** an emancipatory

☐**F** a calming

Question 12 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

In literature, thrillers thrive on heroes and villains, and usually the characterization is not very _____; writers don't want to confuse or slow the plot.

- ☐ **A** nuanced
- ☐ **B** trite
- ☐ **C** realistic
- ☐ **D** monotonous
- ☐ **E** banal
- ☐ **F** subtle

Question 13 is based on the following passage.

> A cave in Central America was occupied by humans for much of the period from 9,000 to 500 years ago. Archaeological excavations in the cave have discovered remains of food plants at every level of habitation, increasing from fewer than ten food plant species in the earliest (lowest) levels to over 30 species in the latest levels. Clearly, later inhabitants of the cave used a greater variety of plants as food than earlier inhabitants did.

Question 13 CR

Select one answer choice.

Which of the following, if true of the cave, most weakens the argument?

- ○ **A** Some of the plant species found in the earlier (lower) levels of habitation are not found at all in the later (upper) levels of habitation.
- ○ **B** The remains of some plant species, such as squash and chili peppers, show changes from the middle to the later (upper) levels that indicate domestication.
- ○ **C** At certain points during the period from 9,000 to 500 years ago, the cave was abandoned for a time and later reoccupied by people who were probably of a different culture than the earlier inhabitants.
- ○ **D** Virtually all the plant remains found at the earliest (lowest) levels of habitation are tough fibers that are relatively resistant to decomposition.
- ○ **E** The total volume of food plant remains found in the earlier (lower) layers was greater than that found in the later (upper) layers.

Questions 14 to 15 are based on the following passage.

Recent scholarship has explored collaborative authorship in the English Renaissance. Critics have studied well-known collaborative teams, such as that of Beaumont and Fletcher, and have now increasingly acknowledged that even some of Shakespeare's plays were likely written with collaborators. Indeed, every major English Renaissance playwright probably worked collaboratively at times. Some critics, such as Jeffrey Masten, hoped that this realization might dislodge traditional notions of authorship as a solitary activity. However, scholars analyzing plays written collaboratively often attempt to attribute acts, scenes, or speeches to individual authors who are thought to have worked separately before joining their work together. Thus, scholars' acceptance of the fact of collaborative writing has done little to change the model of the author; it simply multiplies the number of authors.

Question 14 RC

(Highlighted portion: "Jeffrey Masten")

Select one answer choice.

The author mentions "Jeffrey Masten" primarily to

○**A** note a significant influence on scholars' views about authorial collaboration

○**B** explain how scholars concluded that certain authors worked collaboratively

○**C** challenge a particular argument about the significance of authorial collaboration

○**D** exemplify a particular scholarly point of view regarding authorship

○**E** counter a claim about the ways in which scholars have understood authorial collaboration

Question 15 RC

(Highlighted portion: "the model of the author")

Select one answer choice.

According to the passage, the "model of the author"

○**A** is compatible with some scholars' views on authorial collaboration by English Renaissance playwrights

○**B** is not easy to reconcile with what scholars now understand about the working methods used by playwrights like Beaumont and Fletcher

○**C** has been primarily useful for scholars attempting to understand authorship during the English Renaissance rather than for those thinking about authorship in other eras

○**D** reflects an assumption that most authors during the English Renaissance collaborated with others at least some of the time

○**E** was intended to help distinguish the working methods of playwrights like Beaumont and Fletcher from those of playwrights like Shakespeare
