Section 1 12 Questions · 18 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

Although the nonscientist is amazed by the orderliness of elements in the periodic table, chemists consider this orderliness _____ because of the common origin and similarity of the units of matter that compose the elements.

- ○**A** inexplicable
- ○**B** inappropriate
- ○**C** unnatural
- ○**D** unsurprising
- ○**E** unexpected

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

The idea that arguments based on probability are deployed only by (i) _____ persons is (ii) _____ even among scientists. Perhaps such an evaluation has partly to do with the origins of the subject in the mathematics of gambling games, not generally regarded as pastimes for people of good character.

Blank (i)	Blank (ii)
exacting	widespread
disreputable	controversial
prominent	deplored

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

The notion of "island-centered" history, which mirrored the trend that historians elsewhere were calling "history from below," turned out to be an idea more enthusiastically (i)_____ than (ii)_____. Some explanations are not hard to discover. Islander peoples have left few written sources, and these have often been in languages that Western historians did not (iii)_____.

Blank (i)	Blank (ii)	Blank (iii)
disavowed	empirically realized	diminish
advocated	persuasively undermined	comprehend
researched	casually examined	resist

Questions 4 to 5 are based on the following passage.

The novel《Georges》, published under Alexander Dumas' name, may actually have been written by Felicien Mallefille. A comparison of《Georges》with well-known Dumas' novels such as《The Count of Monte Cristo》suggests that Dumas had little to do with《Georges》. For example, the characters of《Georges》are tiresomely earnest, while those from Dumas' well-known novels crack jokes and utter colorful oaths. Meanwhile, in a technical sense,《Georges》is well-written, while《The Count of Monte Cristo》, with all its verve and sparkle, is full of redundancies, repetitions, and non sequiturs. As Umberto Eco discovered while attempting to translate《The Count of Monte Cristo》, the charm of Dumas' novel and its "narrative wisdom" are inseparable from its "linguistically sludgy and gasping" prose.

Question 4 RC

Select one answer choice.

The author of the passage would be most likely to agree with which of the following statements about Dumas as a novelist?

○**A** His use of non sequiturs detracts from the stylistic verve of his writing.

○**B** His use of repetition has been overrated as effective novelistic technique.

○**C** His reliance on humor results in one-dimensional characters.

○**D** His novels, while technically well written, have predictable plots.

○**E** His writing displays narrative skill despite certain technical flaws.

Question 5 RC

Select one answer choice.

According to the passage, which of the following is true regarding the novel《Georges》?

○**A** Its authorship was widely questioned soon after its publication.

○**B** Its characters are less interesting than those in most Dumas novels.

○**C** It is marred by redundancies, repetitions, and non sequiturs.

○**D** It presents unusual problems for translators.

○**E** It has often been compared favorably to《The Count of Monte Cristo》.

Question 6 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Because it has usually been impossible to eradicate exotic species once they have become established, it is _____ to minimize introductions of species that have substantial probabilities of unwanted impacts.

☐**A** prudent

☐**B** customary

☐**C** provident

☐**D** superfluous

☐**E** essential

☐**F** pointless

Question 7 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The second group of volunteer excavators was far more _____ than the first, and consequently the obstructing material was removed much more rapidly during the second shift.

- ☐ **A** diligent
- ☐ **B** incapacitated
- ☐ **C** experienced
- ☐ **D** punctual
- ☐ **E** debilitated
- ☐ **F** industrious

Question 8 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

During the Second World War, the substantial energy that industrial employers spent convincing workers to wear mandated safe attire suggests that compliance could not be _____.

- ☐ **A** countenanced
- ☐ **B** monitored
- ☐ **C** assumed
- ☐ **D** counted on
- ☐ **E** brought up
- ☐ **F** sanctioned

Question 9 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

By the time they enter sixth grade, many children sleep so little during the school week that daytime drowsiness may _____ their ability to pay attention and learn.

- ☐ **A** compromise
- ☐ **B** define
- ☐ **C** highlight
- ☐ **D** emphasize
- ☐ **E** imperil
- ☐ **F** destroy

Questions 10 to 12 are based on the following passage.

One characteristic of terrestrial cratering is the presence of doublet craters: 3 of the 28 large impact craters on Earth (greater than 20 kilometers diameter) have partner craters. For example, the Kamensk crater in Russia, 25 kilometers in diameter, is partnered by the Gusev crater, 3 kilometers wide and of identical age. Since such doublets form when two well-separated asteroids impact Earth nearly simultaneously, their relatively frequent occurrence serves as evidence for the existence of a substantial population of co-orbiting asteroids.

Are other rocky planets subject to impacts from co-orbiting asteroids? Venus is a promising planet to search for doublets because its surface is young, erosion is nearly nonexistent, and its crater population is significantly larger than Earth's, but not so large that there is a high probability of chance associations. Researchers found that the proportion of doublet craters on Venus is significantly smaller than on Earth. However, Venus' denser atmosphere may screen out the smaller member of some asteroid pairs. If Earth had a similar screening effect, only one of its three known doublets would have formed, making the proportion of doublet craters on Earth (3.6%) identical to Venus' (2.2%) within uncertainties. The researchers concluded that co-orbiting asteroids must be common among both the near-Earth and near-Venus asteroid populations.

Question 10 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** discuss evidence relevant to the frequency of co-orbiting asteroids near Earth and near Venus

○**B** explain an unusual feature of the near-Venus asteroid population relative to the near-Earth asteroid population

○**C** examine the effect of cratering as a factor that distinguishes Venus' surface from Earth's

○**D** consider recent research on the ways in which Venus' atmosphere differs from Earth's

○**E** evaluate recent studies of the relative frequency of impact craters on Earth and on Venus

Question 11 RC

Select one answer choice.

It can be inferred from the passage that one result of establishing the age of impact craters is that it enables researchers to

○**A** determine whether the screening effect of Earth's atmosphere may have diminished over time

○**B** determine whether apparent doublet craters are simply chance associations

○**C** determine whether erosion has wiped out the very oldest craters on Earth

○**D** conclude that co-orbiting asteroids have become more common recently

○**E** conclude that the doublet craters that exist on Earth are all roughly the same age

Question 12 RC 문장선택

Select the sentence in the passage that answers the question.

Select the sentence that proposes a possible explanation for a surprising discovery.

Section 2 15 Questions · 23 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

There is no natural environment on Earth more _____ than a virgin rain forest: a plethora of rain forest species have developed remarkably sophisticated strategies to ensure that their voices are heard.

- ○**A** imperiled
- ○**B** cacophonous
- ○**C** fecund
- ○**D** essential
- ○**E** malleable

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

For a long time now, revenues from Broadway musicals have been (i) _____ with their quality: profits are higher than ever, but with few exceptions, the musicals are not (ii) _____.

Blank (i)	Blank (ii)
at odds	insubstantial
stagnant compared	popular
fluctuating along	first-rate

Question 3 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

Sinden notes that in the face of warnings about the perils of climate change, the need to agree on strategies for reducing greenhouse-gas emissions is increasingly urgent. The question of who should reduce emissions is not (i) _____. Rather, according to Sinden, it is the question of who should bear the costs of these reductions that is (ii) _____.

Blank (i)	Blank (ii)
particularly vexed	redundant
universally resolved	contentious
politically innocuous	prescient

Question 4 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

Climbing mountains in search of an awe-inspiring view can be (i) _____ experience. Too often, the peak seems forever out of reach, always disappearing over the next crest. It's a feeling that (ii) _____ physicists, who have spent much of the last century trudging up a seemingly endless slope in search of truly cosmic vistas. It is proving (iii) _____ climb.

Blank (i)	Blank (ii)	Blank (iii)
a disappointing	is sometimes baffling to	a difficult
a breathtaking	must be shared by	an exhilarating
an unpredictable	often inspires	a productive

Questions 5 to 6 are based on the following passage.

Wildcats are improbable candidates for domestication. Like all felids (cats), wildcats are obligate carnivores, meaning they have a limited metabolic ability to digest anything except proteins. Wildcats live a solitary existence and defend exclusive territories, making them more attached to places than to people. Furthermore, cats do not perform directed tasks and their actual utility is debatable; even as mousers, in this latter role, terrier dogs and ferrets are preferable. Accordingly, there is little reason to believe an early agricultural community would have sought out and selected the wildcat as a house pet. Rather, the best inference is that wildcats exploiting human environments were simply tolerated by people and, over time and space, they gradually diverged from their "wild" relatives.

Question 5 RC

Select one answer choice.

The author would most likely agree that in early agricultural communities cats would have been

- ○**A** more tolerant than ferrets of contact with humans
- ○**B** as incapable of performing directed tasks as ferrets
- ○**C** less likely to be solitary than ferrets
- ○**D** less useful than terrier dogs at controlling rodents
- ○**E** more easily domesticated than terrier dogs

Question 6 RC

Select one answer choice.

Which of the following best describes the function of the highlighted sentence in the context of the passage as a whole?

- ○**A** It challenges a widely accepted theory presented in the passage.
- ○**B** It explains a fact that has long puzzled researchers.
- ○**C** It draws a conclusion from evidence presented in the passage.
- ○**D** It presents new facts in support of a hypothesis.
- ○**E** It formulates a new hypothesis from evidence presented in the passage.

Questions 7 to 9 are based on the following passage.

Paintings of property—anything that was possessed—such as those created by eighteenth-century British painter George Stubbs were condemned by several of Stubbs's contemporaries: objects thus "individualized" would appeal to our appetite to own and enjoy them, whereas "generalized" objects in other paintings were no longer merely things but abstract ideas. To collect or commission paintings displaying lofty unconcern with materiality was considered by these commentators a mark of taste and civic virtue, the ability to subordinate private material interests to the abstract, public interest. Yet this notion of disinterested taste and virtue was founded on private interest: it was because the "public" man or woman already owned enough that he or she was presumed to be free from the urge to own more. Political power and status were thus based on the ownership of property, while at the same time they were legitimated by the claim that the avaricious behavior associated with the acquisition of property was somehow transcended by those who had already acquired it.

Question 7 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** examine the origins of a particular style of painting

○**B** analyze the paintings of a particular school

○**C** point out the weakness that underlies a criticism

○**D** compare two different approaches to the painting of objects

○**E** rebut a criticism of a particular painter's integrity

Question 8 RC

Select one answer choice.

According to the passage, which of the following is true about the painting of property as it is described in the passage?

○**A** It was typified in the work of George Stubbs.

○**B** It was usually commissioned by persons who had great political power.

○**C** It was regarded in the eighteenth century as a mark of good taste.

○**D** It was at its most popular in eighteenth-century Britain.

○**E** It was advocated primarily by those who owned a great deal of property.

Question 9 RC

Select one answer choice.

With which of the following statements about "paintings displaying lofty unconcern with materiality" would the author be most likely to agree?

○**A** Only the property-rich collector could appreciate paintings of this type.

○**B** Such paintings demonstrated the collector's degree of taste and civic virtue.

○**C** Such paintings were often collected by people who were quite property-rich.

○**D** Collectors of such paintings often displayed them for the public's benefit.

○**E** Collectors of such paintings were, as a class, the most avaricious members of their society.

Question 10 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Although both salinization and alkalinization impact water quality, they have generally been treated as _____ phenomena; however, new research proves that the processes, which impact most of the drainage area of the United States, are in fact closely linked.

☐**A** unrelated

☐**B** insignificant

☐**C** unimportant

☐**D** reversible

☐**E** separate

☐**F** incremental

Question 11 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The writer's expression of _____ sentiments in fluid, vigorous prose is a strange blending of the high and the low, like an opera performed by sloppily dressed, unkempt musicians.

- ☐ **A** patriotic
- ☐ **B** vile
- ☐ **C** noble
- ☐ **D** base
- ☐ **E** tender
- ☐ **F** lofty

Question 12 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Accounts of early opera performances—both of the performances themselves and of their social milieu—indicate that the origins of the genre were anything but _____; it began at the peak.

- ☐ **A** lavish
- ☐ **B** disreputable
- ☐ **C** sumptuous
- ☐ **D** decadent
- ☐ **E** plebeian
- ☐ **F** humble

Question 13 is based on the following passage.

> Sport fishers introduced the zander, a type of perch, to Britain's rivers and canals in the 1970s. Because zander eat large numbers of smaller fish, they have had a devastating effect on native fish populations. To protect the native fish, a government program removed a significant proportion of the zander from Britain's waterways last year. Surprisingly, this year the loss of native fish to zander has been greater than before.

Question 13 CR

Select one answer choice.

Which of the following, if true, would most help to explain the greater effect of zander on the native fish population?

- ○ **A** The climate in Britain is very similar to the climate in regions to which zander are native.
- ○ **B** Most of the zander removed were fully grown, and fully grown zander eat large numbers of smaller zander.
- ○ **C** Every year a large number of zander are caught by sport fishers in Britain's waterways.
- ○ **D** Previous government programs designed to remove nonnative species from Britain's waterways have failed.
- ○ **E** Zander are just one of several nonnative fish that prey on the other fish found in Britain's waterways.

Questions 14 to 15 are based on the following passage.

The phonograph never merely recorded music: it changed both how people listened and how they played. Early recordings of violinists suggest that vibrato—the trembling action of hand or fingerboard that gives notes a warbling sweetness—was once used more sparingly than it is today. By the 1930s, many leading violinists had adopted continuous vibrato, which became the approved style taught in conservatories. Musicologist Mark Katz proposes that technology prompted the change. When vibrato's wobble was added to violin tone, the phonograph could pick it up more easily; acoustically, it's a "wider" sound. Also, vibrato's fuzzier focus enabled players to cover up inaccuracies of intonation, and phonographs made players self-conscious about intonation. What worked in recording studios spread to concert stages.

Question 14 RC

Select one answer choice.

According to the passage, in the era before phonographs, violinists probably

○**A** had greater difficulty maintaining intonation than later violinists did

○**B** employed significantly less vibrato than later violinists did

○**C** were unconcerned with others' subjective judgments of their playing

○**D** were more skilled at sight-reading music than later violinists were

○**E** did not understand how to use vibrato effectively

Question 15 RC 복수

Consider each of the choices separately and select all that apply.

The passage implies that after phonograph technology became widespread, which of the following occurred?

☐**A** Violinists playing concerts applied a technique in a way that was first popularized in the recording studio.

☐**B** Conservatories taught violinists to play in a style that matched what was heard on the earliest phonograph recordings of violin playing.

☐**C** Violinists purged from their concert programs pieces of music that were poorly suited to recording.
