S2	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
답															

Section 1 12 Questions · 18 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

To write convincing fiction about the tedium of ordinary life may be one of the hardest challenges facing a novelist, who must find a way to engage the reader despite a focus on _____ events.

- ○**A** distressing
- ○**B** dubious
- ○**C** quotidian
- ○**D** unwonted
- ○**E** nebulous

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

All of these writers rely on (i) _____ and (ii) _____ to make their argument; they take a single idea and illustrate it with endless, rather overblown examples while avoiding any genuinely nuanced analysis.

Blank (i)	Blank (ii)
fabrication	exaggeration
equivocation	speculation
simplification	prevarication

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

During the Harlem Renaissance, Alain Locke (i) _____ the first flourishing of a self-consciously racial art movement in America and was widely credited with providing the philosophical basis for its emergence. His importance as a critic of African America art and as an art theorist is (ii) _____ if controversial, yet he has received (iii) _____ attention for his unique insight into the broad forces that shaped American modernism and cultural nationalism in the visual arts.

Blank (i)	Blank (ii)	Blank (iii)
forestalled	undisputed	undeserved
presided over	misleading	meticulous
seethed over	questionable	insufficient

Questions 4 to 5 are based on the following passage.

Recent studies of ancient Maya water management have found that the urban architecture of some cities was used to divert rainfall runoff into gravity-fed systems of interconnected reservoirs. In the central and southern Maya Lowlands, this kind of water control was necessary to support large populations throughout the year due to the scarcity of perennial surface water and the seasonal availability of rainfall. Some scholars argue that the concentration of water within the urban core of these sites provided a centralized source of political authority for Maya elites based largely on controlled water access. Such an argument is plausible; however, it is less useful for understanding the sociopolitical implications of water use and control in other, water-rich parts of the Maya region.

Question 4 RC

Select one answer choice.

The author of the passage implies which of the following about the political importance of the type of urban water management system described in the passage?

○**A** Because the system was centralized, it allowed political control over a widely scattered population.

○**B** The knowledge required to design and maintain the system became the pretext for Maya elites' political authority.

○**C** By selectively limiting access to water, Maya elites used the system to curb challenges to their authority.

○**D** The system is not sufficient to explain the sources of centralized political power in all parts of the Maya region.

○**E** The system's continued maintenance required political authorities to exert control over an increasing proportion of economic resources.

Question 5 RC 복수

Consider each of the choices separately and select all that apply.

According to the passage, which of the following is true of the water management systems in the central and southern Maya Lowlands?

☐**A** They were implemented in part because of the prevailing pattern of rainfall.

☐**B** They were an integral part of lowland cities' architecture.

☐**C** They were needed because of insufficient resources such as ponds, rivers, and lakes in the lowlands.

Question 6 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

In the early twentieth century, some _____ the environmental benefits of a motor designed to harness the power of the ocean's waves, pointing out that the motor did not create the smoke or soot associated with burning oil.

- ☐ **A** apprehended
- ☐ **B** countenanced
- ☐ **C** extolled
- ☐ **D** predicted
- ☐ **E** exaggerated
- ☐ **F** touted

Question 7 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The decision to rely on mechanical biological treatment to process the two million tons of waste that the region produces annually was _____ to experts, who had long been aware that this approach had several shortcomings.

- ☐ **A** alarming
- ☐ **B** infuriating
- ☐ **C** perplexing
- ☐ **D** humiliating
- ☐ **E** baffling
- ☐ **F** surprising

Question 8 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Methane that is oxidized to diamond is thought to originate from reduced fluids in Earth's upper mantle; the ultimate origin of carbon in diamonds, however, is _____.

- ☐ **A** obscure
- ☐ **B** mysterious
- ☐ **C** contentious
- ☐ **D** crucial
- ☐ **E** forgotten
- ☐ **F** intriguing

Question 9 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Meteorology is one of the few fields of applied science that demands prediction; since prediction involves considerable uncertainty and uncertainty is _____ scientists, meteorology will continue to exist in a fraught intellectual space.

- ☐ **A** mysterious to
- ☐ **B** anathema to
- ☐ **C** discredited by
- ☐ **D** pivotal for
- ☐ **E** repellent to
- ☐ **F** familiar to

Questions 10 to 12 are based on the following passage.

In the early twentieth century, Clements proposed an ecological theory that, while challenged by scientists from its inception, has continued to influence popular conceptions of nature. Clements argued that plants form communities of interdependent species and that these communities function as "superorganisms" that develop over time in a predictable succession of stages to a ”climax" formation. Thus, forests, for example, if undisturbed by humans, will evolve toward a stable community of old-growth trees. However, many botanists immediately pointed out that these supposed superorganisms have no clear edges: while pine forests and hardwood forests might appear to constitute two distinct superorganisms, one of them can blend imperceptibly into the other. Gleason pointed out in 1927 that what Clements called succession often proceeds in both directions simultaneously: prairie gives way to pine woods in one spot while pines give way to prairie in another. Gleason also emphasized the role that chance disturbance, such as fire or variations in rainfall, plays in determining the shape of the landscape.

Question 10 RC 문장선택

Select the sentence in the passage that answers the question.

Select the sentence that presents an illustration of Clements' superorganism concept.

Question 11 RC

Select one answer choice.

According to the passage, which of the following statements about Clements' theory is true?

- ○ **A** The reason for its initial rejection by most scientists was that it challenged established scientific views.
- ○ **B** It received its widest support long after its inception.
- ○ **C** It heightened popular awareness of certain threats to the environment.
- ○ **D** It has influenced the views of nature held by many nonscientists.
- ○ **E** It can be usefully applied to forests but not to other kinds of plant communities.

Question 12 RC 복수

Consider each of the choices separately and select all that apply.

The passage makes which of the following claims about the scientific reaction to Clements' theory?

- ☐ **A** Some scientists began to dispute the theory as soon as it was proposed.
- ☐ **B** Scientists in the late twentieth century had mostly come to accept the theory.
- ☐ **C** Some early-twentieth-century scientists accepted Clements' view of succession but challenged his view of superorganisms.

Section 2 15 Questions · 23 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

Archaeopteryx had feathers on its hind limbs that helped stabilize it and acted as air brakes, allowing the otherwise _____ creature to turn more adeptly and fly steadily.

- ○**A** docile
- ○**B** ungainly
- ○**C** unpredictable
- ○**D** torpid
- ○**E** reckless

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

It was fine to be (i) _____ in the old days when papers were still not losing readers and advertisement revenue was not tough to come by, but many editors today are uneasy about bludgeoning their readers with the inherently (ii) _____ work of cartoonists.

Blank (i)	Blank (ii)
comprehensive	unbalanced
opinionated	flawed
profligate	vacuous

Question 3 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

The company's chief executive is (i) _____ the desire to postpone action until a consensus has been reached. Instead she makes a brief for instinctive decision making, treating extensive deliberation as something to (ii) _____.

Blank (i)	Blank (ii)
intrigued by	shun
comfortable with	implement
skeptical of	put off

Question 4 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

The flood of new candidates, including newcomers, party veterans, and the first female candidate, is a startling (i) _____ Japan's (ii) _____ political successions. The crowded field means that the selection of the new prime minister, instead of being the customary (iii) _____, backroom affair, has become a source of intense public excitement.

Blank (i)	Blank (ii)	Blank (iii)
abbreviation of	scripted	conspicuous
illustration of	chaotic	celebrated
departure from	prolonged	dry

Questions 5 to 6 are based on the following passage.

W.E.B. Du Bois' exhibit of African American history and culture at the 1900 Paris Exposition Universelle attracted the attention of a world of sociological scholarship whose value his work challenged. Du Bois believed that Spencerian sociologists failed in their attempts to gain greater understanding of human deeds because their work examined not deeds but theories and because they gathered data not to affect social progress but merely to theorize. In his exhibit, Du Bois sought to present cultural artifacts that would shift the focus of sociology from the construction of vast generalizations to the observation of particular, living individual elements of society and the working contributions of individual people to a vast functioning social structure.

Question 5 RC

Select one answer choice.

The passage implies that Du Bois attributed which of the following beliefs to Spencerian sociologists?

○**A** Theorizing is important to the understanding of human actions

○**B** Vast generalizations have limited value.

○**C** Data gathering is a relatively unimportant part of sociological research.

○**D** Sociology should focus on the living elements of society rather than cultural artifacts.

○**E** Particulars are more important than universals.

Question 6 RC 복수

Consider each of the choices separately and select all that apply.

It can be inferred from the passage that Du Bois believed which of the following statements about the artifacts he included in his exhibit?

☐**A** They tended to support an established view of African American history and culture.

☐**B** They documented the contributions of particular African Americans to American social structure.

☐**C** They were chosen to encourage Spencerian sociologists to form useful generalizations.

Questions 7 to 9 are based on the following passage.

What accounts for the low-lying, flat surface of Mars's north? On Earth's surface, higher- and lower-lying areas have different types of crust: one, thin and dense, is pulled toward Earth's center more strongly by gravity, and the planet's water naturally comes to sit over it, creating oceans. The processes that generate this oceanic crust drive plate tectonics. Is Mars's north similarly characterized by a sort of crust different from other areas of the planet? Some researchers do see signs of tectonic activity surrounding the northern basin that suggest that it was created through the formation of new crust, like ocean basins on Earth.

However, McGill points to northern bedrock structures that predate the features said to mark the start of the tectonic process. McGill instead believes that through some novel mechanism the ancient surface sank to its current depth as a single unit. This would explain why features around the basin's edge, which would have formed as the surface dropped, seem to be younger than structures at its floor.

The third possibility is that the northern lowlands result from impacts. Some researchers suggest they formed as a series of big overlapping impact craters. Others, arguing that the odds against such a pattern of impacts are large, postulate a single event—the impact of an object bigger than any asteroid the solar system now contains.

Question 7 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** explore an analogy between aspects of the geology of Mars and the geology of Earth

○**B** describe how a certain feature of Mars's surface formed

○**C** point out the effect that new data has had on a scientific investigation

○**D** summarize potential explanations of a large-scale geological feature

○**E** present the rationale for a scientist's theory and expose some of its weakness

Question 8 RC

Select one answer choice.

Which of the following can be inferred from the passage about geological features on Earth?

○**A** The relative elevation of the lowest-lying regions of the crust arises in part from forces generated within the planet.

○**B** The difference in elevation between the ocean basins and their surroundings is greater than the difference between Mars's northern basin and its surroundings.

○**C** The formation of low-lying areas proceeds by a different process than the one that created Mars's northern basin.

○**D** The weight of the oceans does not affect the depth of the ocean basins.

○**E** The proportions of the crust that is oceanic crust is increasing.

Question 9 RC

Select one answer choice.

As presented in the passage, McGill's account of the formation of Mars's northern basin differs from the other mentioned in that it alone

- ○**A** explains the formation of certain northern bedrock features
- ○**B** does not specify the force that caused the northern basin to be lower than its surroundings
- ○**C** takes the northern basin to be a landform that is not analogous to any found on Earth
- ○**D** denies that features around the northern basin are the result of tectonic activity
- ○**E** attributes the creation of the northern lowlands to processes occurring within the planet

Question 10 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Local seawater acidification caused by carbon dioxide bubbling from the Pacific Ocean floor above a buried volcano _____ projected levels of climate-change-induced ocean acidification and so provides insight into likely future reef ecosystem effects.

- ☐**A** alleviates
- ☐**B** emulates
- ☐**C** mitigates
- ☐**D** induces
- ☐**E** intensifies
- ☐**F** mirrors

Question 11 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Though the progress of the reform legislation was _____, it was surprisingly steady, and there never seemed any reasonable doubt that it would eventually be enacted into law.

- ☐**A** unwieldy
- ☐**B** erratic
- ☐**C** hindered
- ☐**D** snail-like
- ☐**E** ponderous
- ☐**F** unreliable

Question 12 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Between 1975 and 2005, water use in the United States declined just as the population rose, showing the old assumption that total water consumption is positively correlated with population growth to be _____.

- ☐ **A** ubiquitous
- ☐ **B** specious
- ☐ **C** fallacious
- ☐ **D** controversial
- ☐ **E** unequivocal
- ☐ **F** commonplace

Question 13 is based on the following passage.

> Opponents of a proposal to extend the city's subway line to two new stations claim that the project will benefit only a small portion of the city's population. These opponents are misguided. After all, the last time the line was extended, the greater availability of quick transport to the city reduced the number of private cars on city streets, thus benefiting everyone by easing rush-hour traffic.

Question 13 CR

Select one answer choice.

In the argument in the editorial, the part ("the project ~ population") that is highlighted plays which of the following roles?

- ○ **A** stating the conclusion toward which the argument is directed
- ○ **B** describing a circumstance that the argument seeks to explain
- ○ **C** introducing the position to be refuted by the argument
- ○ **D** serving as an intermediate conclusion that supports a further conclusion stated in the argument
- ○ **E** introducing an explanation that is called into question by the argument

Questions 14 to 15 are based on the following passage.

> The discovery of subsurface life on Earth, surviving independently from surface life, refuted the belief that biological processes require not only liquid water but sunlight as well, thus greatly enhancing the possibility of life beyond Earth. Take Jupiter's moon Europa. Space probes show a body covered with a thick layer of ice. As Europa orbits its planet, however, it flexes due to the gravitational tug-of-war between it, its sister moons, and Jupiter. Through friction, this flexing produces heat in the moon's interior capable of melting ice. Indeed, observations suggest liquid water exists beneath Europa's icy crust. Photosynthetic life is impossible there because sunlight is completely absent, but life such as the microbes that flourish deep within earth may still be possible.

Question 14 RC 복수

Consider each of the choices separately and select all that apply.

Life on Europa in the form suggested in the passage would be dependent on

- ☐ **A** the protection Europa's icy crust gives against the harmful components of sunlight
- ☐ **B** the existence of water on Europa
- ☐ **C** the motion of Europa around Jupiter

Question 15 RC

Select one answer choice.

The highlighted sentence "Take Jupiter's moon Europa" serves to introduce

- ○ **A** an instance that allows a hypothesis to be tested
- ○ **B** speculation grounded in empirical discovery
- ○ **C** a deduction from a newly advanced hypothesis
- ○ **D** a large-scale effect of an apparently insignificant contingency
- ○ **E** the derivation of a contradiction to refute a claim
