Recent studies of ancient Maya water management have found that the urban architecture of some cities was used to divert rainfall runoff into gravity-fed systems of interconnected reservoirs. In the central and southern Maya Lowlands, this kind of water control was necessary to support large populations throughout the year due to the scarcity of perennial surface water and the seasonal availability of rainfall. Some scholars argue that the concentration of water within the urban core of these sites provided a centralized source of political authority for Maya elites based largely on controlled water access. Such an argument is plausible; however, it is less useful for understanding the sociopolitical implications of water use and control in other, water-rich parts of the Maya region.

○**A** Because the system was centralized, it allowed political control over a widely scattered population.

○**B** The knowledge required to design and maintain the system became the pretext for Maya elites' political authority.

○**C** By selectively limiting access to water, Maya elites used the system to curb challenges to their authority.

○**D** The system is not sufficient to explain the sources of centralized political power in all parts of the Maya region.

In the early twentieth century, Clements proposed an ecological theory that, while challenged by scientists from its inception, has continued to influence popular conceptions of nature. Clements argued that plants form communities of interdependent species and that these communities function as "superorganisms" that develop over time in a predictable succession of stages to a ”climax" formation. Thus, forests, for example, if undisturbed by humans, will evolve toward a stable community of old-growth trees. However, many botanists immediately pointed out that these supposed superorganisms have no clear edges: while pine forests and hardwood forests might appear to constitute two distinct superorganisms, one of them can blend imperceptibly into the other. Gleason pointed out in 1927 that what Clements called succession often proceeds in both directions simultaneously: prairie gives way to pine woods in one spot while pines give way to prairie in another. Gleason also emphasized the role that chance disturbance, such as fire or variations in rainfall, plays in determining the shape of the landscape.

W.E.B. Du Bois' exhibit of African American history and culture at the 1900 Paris Exposition Universelle attracted the attention of a world of sociological scholarship whose value his work challenged. What accounts for the low-lying, flat surface of Mars's north? On Earth's surface, higher- and lower-lying areas have different types of crust: one, thin and dense, is pulled toward Earth's center more strongly by gravity, and the planet's water naturally comes to sit over it, creating oceans. The processes that generate this oceanic crust drive plate tectonics. Is Mars's north similarly characterized by a sort of crust different from other areas of the planet? Some researchers do see signs of tectonic activity surrounding the northern basin that suggest that it was created through the formation of new crust, like ocean basins on Earth.

However, McGill points to northern bedrock structures that predate the features said to mark the start of the tectonic process. McGill instead believes that through some novel mechanism the ancient surface sank to its current depth as a single unit. This would explain why features around the basin's edge, which would have formed as the surface dropped, seem to be younger than structures at its floor.

The third possibility is that the northern lowlands result from impacts. Some researchers suggest they formed as a series of big overlapping impact craters. Others, arguing that the odds against such a pattern of impacts are large, postulate a single event—the impact of an object bigger than any asteroid the solar system now contains.

하나의 대규모 지질 특성(북부 저지대)에 대한 여러 가능한 설명을 정리 → D.
정답: D

B(형성 과정 설명)는 하나의 결론을 내리는 것처럼 표현되어 틀리다. 지문은 세 가지 가설을 나열할 뿐 결론을 내리지 않는다.
E는 McGill 한 사람에 국한되어 범위가 좁다.

Which of the following can be inferred from the passage about geological features on Earth?

○**A** The relative elevation of the lowest-lying regions of the crust arises in part from forces generated within the planet.

○**B** The difference in elevation between the ocean basins and their surroundings is greater than the difference between Mars's northern basin and its surroundings.

○**C** The formation of low-lying areas proceeds by a different process than the one that created Mars's northern basin.

○**D** The weight of the oceans does not affect the depth of the ocean basins.

○**E** The proportions of the crust that is oceanic crust is increasing.

B: 고도 차이 비교 없음. C: 일부 연구자는 화성도 같은 과정으로 봄 → 단정 불가. D: 물의 무게 언급 없음. E: 해양 지각 비율 증가 언급 없음.
정답: A

⚠ **함정 / 오답 포인트**
C는 McGill이나 충돌 가설을 근거로 그럴듯해 보이지만, 지문은 화성 분지 형성 과정을 확정하지 않으므로 '다르다'고 추론할 수 없다.

As presented in the passage, McGill's account of the formation of Mars's northern basin differs from the other mentioned in that it alone

○**A** explains the formation of certain northern bedrock features

○**B** does not specify the force that caused the northern basin to be lower than its surroundings

○**C** takes the northern basin to be a landform that is not analogous to any found on Earth

○**D** denies that features around the northern basin are the result of tectonic activity

○**E** attributes the creation of the northern lowlands to processes occurring within the planet

'some novel mechanism'(어떤 새로운 메커니즘) → 무엇이 가라앉혔는지 구체적 힘을 명시하지 않는다.

다른 가설은 판구조(새 지각 형성), 충돌(소행성)이라는 원인을 명시 → B.

⚠ **함정 / 오답 포인트**

E(내부 과정에 의한 형성)는 그럴듯하지만, 판구조 가설도 내부 과정이므로 McGill만의 특징이 아니다. A는 기반암 구조를 McGill이 '설명'한 것이 아니라 근거로 '지적'한 것.

emulates와 mirrors가 같은 의미.
정답: B (emulates), F (mirrors)

⚠ **함정 / 오답 포인트**
alleviates/mitigates(완화하다)는 짝이 되지만, 미래 효과에 대한 통찰을 준다는 결과와 맞지 않는다. intensifies도 짝이 없다.

Though the progress of the reform legislation was _____, it was surprisingly steady, and there never seemed any reasonable doubt that it would eventually be enacted into law.

- ☐ **A** unwieldy
- ☐ **B** erratic
- ☐ **C** hindered
- ☐ **D** snail-like
- ☐ **E** ponderous
- ☐ **F** unreliable

해설
단서: Though ___, it was surprisingly steady → 빈칸은 '꾸준함'과 대조되지만 공존할 수 있는 성질.
'결국 법으로 통과될 것에 의심이 없었다' → 진행은 느렸지만 꾸준했다.

snail-like(달팽이처럼 느린)와 ponderous(느릿느릿한, 둔중한)가 짝.
정답: D (snail-like), E (ponderous)

Between 1975 and 2005, water use in the United States declined just as the population rose, showing the old assumption that total water consumption is positively correlated with population growth to be _____.

- ☐ **A** ubiquitous
- ☐ **B** specious
- ☐ **C** fallacious
- ☐ **D** controversial
- ☐ **E** unequivocal
- ☐ **F** commonplace

빈칸 = '틀린'.
specious(그럴듯하지만 틀린)와 fallacious(잘못된)가 짝.
정답: B (specious), C (fallacious)

⚠ **함정 / 오답 포인트**
controversial(논쟁적인)은 '오래된 가정'과 어울려 보이지만, 데이터가 가정을 반증했으므로 '틀렸다'가 핵심이다.
ubiquitous/commonplace는 짝이 되지만 의미가 맞지 않는다.

fallacious 잘못된, 오류의 · **specious** 그럴듯하나 틀린 · **ubiquitous** 어디에나 있는 · **controversial** 논란이 많은 · **unequivocal** 명백한 · **commonplace** 흔한

Opponents of a proposal to extend the city's subway line to two new stations claim that the project will benefit only a small portion of the city's population. These opponents are misguided. After all, the last time the line was extended, the greater availability of quick transport to the city reduced the number of private cars on city streets, thus benefiting everyone by easing rush-hour traffic.

The discovery of subsurface life on Earth, surviving independently from surface life, refuted the belief that biological processes require not only liquid water but sunlight as well, thus greatly enhancing the possibility of life beyond Earth. Take Jupiter's moon Europa. Space probes show a body covered with a thick layer of ice. As Europa orbits its planet, however, it flexes due to the gravitational tug-of-war between it, its sister moons, and Jupiter. Through friction, this flexing produces heat in the moon's interior capable of melting ice. Indeed, observations suggest liquid water exists beneath Europa's icy crust. Photosynthetic life is impossible there because sunlight is completely absent, but life such as the microbes that flourish deep within earth may still be possible.

Life on Europa in the form suggested in the passage would be dependent on

- ☐ **A** the protection Europa's icy crust gives against the harmful components of sunlight
- ☐ **B** the existence of water on Europa
- ☐ **C** the motion of Europa around Jupiter

해설
근거: 'life such as the microbes that flourish deep within earth may still be possible' - 이런 생명은 액체 물을 필요로 한다.
B: 'observations suggest liquid water exists beneath Europa's icy crust' → 물 필요.
C: 그 물은 공전하며 휘어짐(flexing) → 마찰열 → 얼음이 녹아 생김 → 공전 운동에 의존.
A: 햇빛 차단은 언급 없음(햇빛이 없어서 광합성 불가일 뿐).
정답: B, C

⚠ **함정 / 오답 포인트**
A는 '얼음 지각'과 '햇빛'이 지문에 있어 끌리지만, 지문은 얼음이 해로운 햇빛을 막는다고 하지 않는다. C는 인과 사슬이 길어 놓치기 쉽다.

- ○ **B** speculation grounded in empirical discovery
- ○ **C** a deduction from a newly advanced hypothesis
- ○ **D** a large-scale effect of an apparently insignificant contingency
- ○ **E** the derivation of a contradiction to refute a claim

해설
첫 문장: 지하 생명의 '발견(empirical discovery)'이 지구 밖 생명의 가능성을 높였다.
'Take Jupiter's moon Europa.' 이후: 관측에 근거해 유로파에 지하 생명이 '가능할 수 있다(may still be possible)'는 추측을 전개.

정답: B

⚠ **함정 / 오답 포인트**
A(가설 검증 사례)는 그럴듯하지만, 유로파는 가설을 '검증'하는 사례가 아니라 가능성을 추측하는 대상이다. C는 '새로 제시된 가설'로부터의 연역이 아니라 발견에서 나온 추측이다.

단어
empirical 경험적인, 관찰에 근거한 · **speculation** 추측 · **deduction** 연역, 추론 · **contingency** 우발적 사건
