S2	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
답															

Section 1 12 Questions · 18 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

Many readers today consider the moral sentiments expressed in the ancient writers' work to be quite vapid, and in the seventeenth century they were similarly regarded as _____.

- ○**A** jejune
- ○**B** didactic
- ○**C** dogmatic
- ○**D** tendentious
- ○**E** arcane

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

The priorities at astronomical observatories changed dramatically in the period. A major reason was the (i) _____ government funding for solar system research: the national government, eager to bolster the sense that the country was a supportive place for scientists, made a concerted effort to (ii) _____ studies of the moon, the planets, and near space.

Blank (i)	Blank (ii)
curb on	stymie
spate of	maintain
continuation of	accelerate

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

When potentially disruptive change appears on the horizon, managers' approach should be to assemble the capabilities to (i) _____ that change before it affects the mainstream business. The (ii) _____ to run two businesses, one with processes attuned to the existing business model and another geared toward the new model. While apparently onerous, this parallel operation is far less dangerous than either (iii) _____ innovation irrevocably or remaining committed to tried-and-true methods that are threatened with obsolescence.

Blank (i)	Blank (ii)	Blank (iii)
obstruct	competition might have	jumping into
stimulate	requirement is	exploring
handle	mistaken approach is	rejecting

Questions 4 to 5 are based on the following passage.

Benjamin Franklin is portrayed in American history as the quintessential self-made man. In "Self-reliance", Emerson asks, "Where is the master who could have instructed Franklin?" In fact, Franklin took instruction widely, and his scientific work was highly collaborative. Friends in England sent equipment needed for his electrical experiments, others, in Philadelphia, helped him set up his workshop there. Philip Syng constructed a device for generating electrical charges, while Tomas Hopkinson demonstrated the potential of pointed conductors. Franklin, in addition to being the group's theoretician, wrote and published its results. His fame as an individual researcher is partly a consequence of the shorthand by which when one person writes about a group's discoveries, history sometimes grants singular credit for collective effort.

Question 4 RC

Select one answer choice.

Which of the following best describes the function of the highlighted sentence?

○**A** It states a viewpoint about Franklin with which the author disagrees.

○**B** It introduces new evidence about Franklin's role in the collaborative process.

○**C** It explains Franklin's reputation in terms of a broad scholarly phenomenon.

○**D** It emphasizes the extent to which Franklin relied on others in his workshop.

○**E** It describes Franklin's approach to writing scientific results.

Question 5 RC

(Highlighted portion: "Emerson")

Select one answer choice.

"Emerson" is mentioned in the passage primarily to

○**A** Identify the origin of a particular understanding of Franklin

○**B** Elaborate on a view of Franklin that the author takes issue with

○**C** Point to a controversial claim about Franklin's historical legacy

○**D** Introduce the question of what Franklin's main scientific influences were

○**E** Suggest that Franklin was resistant to collaboration with other scientists

Question 6 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

We tend to think of plants as _____, yet in a sense, some move with spectacular speed as they propel their reproductive particles—seeds and spores, pollen and sperm as far as they can.

☐**A** hardy

☐**B** stationary

☐**C** innocuous

☐**D** mundane

☐**E** inert

☐**F** harmless

Question 7 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

There is a vast disparity of computational power between mathematical _____ like many of us and a mathematical prodigy like Ramanujan.

- ☐ **A** dullards
- ☐ **B** enthusiasts
- ☐ **C** virtuosos
- ☐ **D** tyros
- ☐ **E** geniuses
- ☐ **F** novices

Question 8 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The series of paintings, as a whole, is remarkably _____ despite the distinctive character of each canvas.

- ☐ **A** interconnected
- ☐ **B** challenging
- ☐ **C** comprehensive
- ☐ **D** homogenous
- ☐ **E** provocative
- ☐ **F** uniform

Question 9 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

In the northeastern United States, beaver populations had been critically reduced or even _____ in large areas at the end of nineteenth century; as a result, several states instituted prohibitions on beaver trapping.

- ☐ **A** diminished
- ☐ **B** extirpated
- ☐ **C** eliminated
- ☐ **D** devalued
- ☐ **E** weakened
- ☐ **F** underrated

Questions 10 to 12 are based on the following passage.

The recently announced discovery of the first known planet orbiting a pulsar (the ultradense, pulsating remnant off the supernova explosion of a star) turned out to be based on faulty data. Had this discovery been confirmed, theorists would have had difficulty accounting for the existence of such a planet. The supernova would certainly have destroyed any preexisting planets. This particular pulsar is relatively young, allowing little time for a new planet to have coalesced, and it rotates relatively slowly, implying that it has not interacted with any nearby star since the supernova.

But newer evidence of a different pulsar with planets is more promising. This is a rapidly spurring "millisecond pulsar" thought to be a much older object that has pulled gaseous material from a stellar neighbor, causing its rotational speed to increase. Leftover, unconsumed gas around such a pulsar could, in theory, coalesce into planets. Or the pulsar's radiation might have vaporized a companion star, providing new material for planetary formation.

Question 10 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** provide an example of the dangers of a recent discovery based on faulty data

○**B** illustrate the difficulty of explanation concerning a recent discovery

○**C** assess the credibility of recent findings concerning the as yet unverified existence of a class of objects

○**D** argue that a certain hypothesis fails to account for a seemingly contradictory phenomenon

○**E** demonstrate how difficult it might be to find out the reality of a phenomenon

Question 11 RC

Select one answer choice.

Which of the following best describes the organization of the passage?

○**A** Two sets of research findings relating to similar phenomenon are mentioned, and the theoretical implications of each are discussed.

○**B** A theoretical explanation of a phenomenon is presented and rejected, and a more attractive alternative is offered.

○**C** Two independent and divergent interpretations of a set of observational data are compared and one is favored over the other.

○**D** An example of careless scientific research is introduced and contrasted with a more rigorous analysis of the same material.

○**E** The state of knowledge of an unexplainable phenomenon is outlined and an approach to further investigation is recommended.

Question 12 RC

Select one answer choice.

Which of the following can be inferred regarding the pulsar discussed in the first paragraph?

○**A** Theorists initially doubted its existence.

○**B** If its existence had been confirmed, astronomers would have turned their attention to the pulsar discussed in the second paragraph.

○**C** If the supernova explosion that created it had been more powerful, the resulting radiation would have preceded the subsequent formation of a planet.

○**D** If it had interacted with a nearby star since the supernova explosion, it would rotate faster than it does.

○**E** Astronomers' interest in it ultimately led to a new theory of planetary formation.

Section 2 15 Questions · 23 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

In general, the relationship between neural activity and behavioral output is _____: multiple behaviors can be associated with activation of the same neurons and multiple neurons can trigger the same behavior.

- ○**A** deterministic
- ○**B** hardwired
- ○**C** random
- ○**D** complicated
- ○**E** cumulative

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

When in 1980 the father and son pair of Louis and Walter Alvarez and their colleagues linked the end-Cretaceous extinction to a catastrophic extraterrestrial impact, they were met with skepticism by most paleontologists, which was (i)_____ given that geological training since the mid-1800s had emphasized the primacy of (ii)_____.

Blank (i)	Blank (ii)
unsurprising	discernible causes
unwarranted	gradual processes
prescient	reversible changes

Question 3 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

As cheaper imports drove most California potteries out of business during the 1950s, one company (i) _____. The substantial size and weight of the specialized products produced by Architectural Pottery helped (ii) _____ the company, because it was uneconomical for foreign companies to ship similarly large objects to California.

Blank (i)	Blank (ii)
stagnated	transform
diversified	insulate
flourished	finance

Question 4 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

Proposed technological innovations aimed at removing carbon dioxide from the atmosphere would likely be more (i) _____ than transitioning to clean energy sources. Still, according to some energy experts, given the political barriers to emissions reductions and the scale of reductions needed, it is (ii) _____ that some carbon-capture technology will (iii) _____ some of the worst effects of warming.

Blank (i)	Blank (ii)	Blank (iii)
realistic	unlikely	succeed in countering
costly	puzzling	appear to exacerbate
effective	inevitable	be required to avoid

Questions 5 to 6 are based on the following passage.

The concept of "soul food," popularized in northern and western American cities in the 1960s, presented a simplified narrative of African American cooking to unify diverse communities and instill cultural pride. Traditionally explained by reciting its constituent recipes and ingredients, the cuisine became synonymous with foods such as catfish and black-eyed peas. But renowned African American chef and cookbook author Edna Lewis rebelled against the strictures of this invented tradition. Lewis was a proponent of the living custom of southern food, which emphasized the diversity of the cuisine of her southern childhood. For Lewis, soul food constituted a limited and static rendition of southern food; however, Americans who first encountered the cuisine in the North or the West lacked the same regional frame of reference.

Question 5 RC

(Highlighted portion: “ingredients”)

Select one answer choice.

The passage implies that the "ingredients" associated with soul food

○**A** were rarely included as components of the recipes that Edna Lewis published in her cookbooks

○**B** may have been less representative of any particular United States regional cuisine than has sometimes been assumed

○**C** were differently prepared by African Americans in the South than by other southerners

○**D** were probably consumed less often by African Americans in the South than by African Americans in the North or the West

○**E** would have been largely unavailable to most consumers outside the southern United States before the 1960s

Question 6 RC

(Highlighted portion: "Americans who first encountered the cuisine in the North or the West")

Select one answer choice.

The author of the passage mentions "Americans who first encountered the cuisine in the North or the West" primarily to

○**A** shed light on a divergence of opinions about the origins of soul food

○**B** challenge the idea that soul food reflected the diet of a particular region

○**C** explain why some typical southern foods but not others came to be identified with soul food

○**D** point out the culturally specific nature of Lewis's perspective on soul food

○**E** undermine Lewis's view about soul food by highlighting an inherent contradiction

Questions 7 to 9 are based on the following passage.

Studies comparing children's memory for television news stories with their recall of print versions containing exactly the same verbal information generally show that television news is remembered best. Paivio's dual-coding hypothesis, a frequent explanation, suggests that audiovisual information is stored in memory as two separate but associated codes—one verbal and one visual—whereas text-only information is stored as a verbal code only. During recall, the visual-memory code serves as an extra retrieval cue, which could account for the superior recall of television stories.

However, experiments show that learning is enhanced only by the addition of "redundant" pictures, which convey the same basic meaning as the words. When pictures and words do not coincide, children do not remember more and sometimes remember less from television presentations than from purely verbal presentations. Theories based on the concept of "limited attentional capacity" posit that when verbal and visual information do not correspond, viewers' attentional capacity is exceeded and part of the information is lost. In the case of nonredundant audiovisual information, viewers tend to direct their attention to the visual images because meaning is conveyed more readily through pictures; this preference may hinder learning because the main message in television news is usually provided in the spoken commentary.

Question 7 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** illustrate the processes through which a particular phenomenon takes place

○**B** introduce additional information in order to qualify a particular explanation for a phenomenon

○**C** explain an apparent contradiction in the results of an experiment concerning a particular phenomenon

○**D** describe two experiments concerning a particular phenomenon in order to compare opposing theories about that phenomenon

○**E** outline the types of evidence that are typically used to support particular theory about a phenomenon

Question 8 RC

Select one answer choice.

According to the passage, Paivio's dual-coding hypothesis suggests that the difference between viewers' ability to recall television news stories and their ability to recall print versions of the same stores is primarily the result of the fact that viewers can do which of the following?

○**A** Reduce information conveyed in two different forms to a single type of memory code.

○**B** Remain within their attentional capacity by avoiding the storage of redundant information.

○**C** Translate text-only information into both verbal-memory and visual-memory codes.

○**D** Determine whether the pictures and words in a television news story coincide.

○**E** Retrieve information through the use of more than one memory code.

Question 9 RC

(Highlighted portion: "Studies comparing children's memory")

Select one answer choice.

If theories of limited attentional capacity, as described in the passage, are correct, which of the following is most likely to be true of the news stories used in the "studies comparing children's memory"?

○**A** The main message in the television news stories was provided through visual images.

○**B** The effort required to process the print versions of the news stories exceeded the attentional capacity of the children in the studies.

○**C** The visual component of the television news stories provide information that was redundant with the spoken commentary.

○**D** The difficulty of the print versions of the news stories prevent the children from storing the information presented in the studies comparing as a verbal code.

○**E** The television news stories included less verbal information than did the print versions of the stories.

Question 10 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Because the political situation seriously impeded international communication, French scientific research was at that time uncharacteristically _____.

☐**A** biased

☐**B** insular

☐**C** competitive

☐**D** misleading

☐**E** deceptive

☐**F** parochial

Question 11 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

There is very little _____ in culture: an art form or a practice (or a language or an institution) can become extinct in a generation if it does not evolve.

- ☐ **A** inertia
- ☐ **B** homogeneity
- ☐ **C** symbiosis
- ☐ **D** stasis
- ☐ **E** cooperation
- ☐ **F** waste

Question 12 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Scientists are finding that the adult brain is far more _____ than they once thought: our behavior and environment can cause substantial rewiring of the brain or a reorganization of its functions and where they are located.

- ☐ **A** reparable
- ☐ **B** heterogeneous
- ☐ **C** malleable
- ☐ **D** variegated
- ☐ **E** complex
- ☐ **F** plastic

Question 13 is based on the following passage.

> Centuries ago, the Maya of Central America produced elaborate, deeply cut carvings in stone. Given the technology available to the Maya, the carvings could only have been made with tools of stone or iron. Mayan stone tools have been found, but experiments reveal that these tools are not hard enough to make anything but very small markings in the stone used for the carvings. Therefore, the Maya must have used iron tools for the carvings.

Question 13 CR

Select one answer choice.

Which of the following is an assumption on which the argument depends?

- ○ **A** Nearby cultures in North and Central America used iron tools for carving stone.
- ○ **B** The Mayans did not use tools made from softer metals than iron for other purposes.
- ○ **C** The stone from which these carvings are made is no softer than the stone used in the carvings of other Central American peoples.
- ○ **D** The stone tools that have been found are among the hardest stone tools used by the Maya.
- ○ **E** Iron tools were found at the same Mayan sites at which the stone tools were found.

Questions 14 to 15 are based on the following passage.

Astronomers can measure any given star's radial velocity by examining its spectrum—light spread out into its constituent wavelengths. If an object is moving toward us, its spectral lines shift to shorter wavelengths; if it's moving away, the lines swing to longer wavelengths. The higher the velocity, the greater the shift. Although this sort of spectral analysis is straightforward for nearby stars, it becomes far more difficult for distant stars in the Milky Way's outer halo. Even large telescopes can't gather enough of their light. For this reason, astronomer Ulrich Heber conjectures that there are probably several low-mass hypervelocity stars yet to be discovered. Although these diminutive objects live longer than B-type stars, which are extremely luminous and blue, they radiate much less light.

Question 14 RC

Select one answer choice.

Which of the following best describes the function of the highlighted sentence in the context of the passage as a whole?

○**A** It suggests why a technique discussed in the passage is becoming outmoded.

○**B** It confirms the existence of dimmer stars in the Milky Way outer halo.

○**C** It explains a shortcoming of a commonly used technique.

○**D** It supports the arguments of astronomers who challenge Heber's conjecture.

○**E** It bolsters the passage's claim that larger telescopes need to be built.

Question 15 RC

Select one answer choice.

The passage suggests that Heber would be most likely to agree with which statement about low-mass hypervelocity stars?

○**A** The spectral lines of low-mass hypervelocity stars are subject to constant fluctuation.

○**B** Methods other than spectral analysis have failed to confirm the existence of low-mass hypervelocity stars.

○**C** Low-mass hypervelocity stars are more numerous in the Milky Way than B-type stars.

○**D** There are more low-mass hypervelocity stars than currently available methods are capable of detecting.

○**E** The light from low-mass hypervelocity stars cannot be distinguished from the light of brighter B-type stars.
