Section 1 12 Questions · 18 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

In theory, when water freezes, ice crystals grow only from pure water, while any impurities are _____ the ice structure and are eventually swept away.

- ○**A** dispersed throughout
- ○**B** incorporated into
- ○**C** rejected from
- ○**D** trapped in
- ○**E** concealed by

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

The building affairs minister rightly recognizes that the current planning system—under which the government controls every aspect of construction—creates disastrous developments, but she is wrong to propose the opposite: the wholesale (i) _____ of the building market. Such a complete (ii) _____ of responsibility on the part of the state can hardly be in the public's interest.

Blank (i)	Blank (ii)
liberalization	abnegation
preservation	recapitulation
regulation	accretion

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

The advance of medical knowledge is not always (i) _____; on the contrary, it is often the result of (ii) _____. In the 1830s, groups of doctors began to question long-enshrined treatments such as bleeding, cupping, and purging, eventually discovering that many ailments were more effectively treated by nothing more than bed rest, nutrition, and observation. This news must have been (iii) _____ to those with a vested interest in the medical orthodoxy of the time.

Blank (i)	Blank (ii)	Blank (iii)
scientific	patient repetition	unsurprising
experimental	heretical departures	welcome
cumulative	chance discoveries	jarring

Questions 4 to 5 are based on the following passage.

Female Australian Dunatothrips (small, sap-sucking insects) create tent-like structures on the surface of leaves to protect themselves and their eggs and larvae from desiccation in the arid Australian climate. Bono and Crespi compared survival and reproduction of thrips that founded structures alone with those in groups of two or more individuals. They found that although per capita egg production fell with increasing group size, foundresses were more likely to survive and lay eggs in groups than when alone. Several studies of other species of nest-building insects have concluded that foundress associations are beneficial to all parties. It is likely that the relative success of groups is at least in part accounted for by a reduction of energy use in the modification of a shared nest.

Question 4 RC

Select one answer choice.

The author would most likely agree with which of the following claims about Australian Dunatothrips?

- ○**A** Their offspring survival rates increase when large groups cooperate to modify nests.
- ○**B** Their effect on the leaves used to support their tent-like structures is not necessarily permanent.
- ○**C** They expend as much energy to create tent-like structures as they do to produce broods.
- ○**D** They exhibit an effect from collective activity that is also found in certain other insect species.
- ○**E** They modify nests in different ways depending on what other species are present in their vicinity.

Question 5 RC

(Highlighted portion: "desiccation")

Select one answer choice.

The author mentions "desiccation" primarily to

- ○**A** describe an environment suitable for one species' reproduction
- ○**B** characterize a stage in an insect species' developmental cycle
- ○**C** analyze an environmental challenge faced by some insect species
- ○**D** exemplify a changing feature of a particular climate
- ○**E** identify the purpose served by a particular behavior

Question 6 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Debate rages on between proponents of corporal punishment and the death penalty and their detractors, though even the most rabid supporter agrees that punishments must be _____ and the justice system evenhanded and thorough.

- ☐**A** meet
- ☐**B** clement
- ☐**C** delimited
- ☐**D** condign
- ☐**E** tantamount
- ☐**F** merciful

Question 7 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

To keep the museum's admission lines moving, security inspections are considerably _____.

- ☐ **A** thorough
- ☐ **B** annoying
- ☐ **C** cursory
- ☐ **D** casual
- ☐ **E** irritating
- ☐ **F** methodical

Question 8 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

In the realm of science and mathematics, ambiguity is generally seen as something that arises from erroneous understanding and must be overcome, yet ambiguity has often _____ developments in science and mathematics.

- ☐ **A** preceded
- ☐ **B** scotched
- ☐ **C** stimulated
- ☐ **D** hindered
- ☐ **E** accompanied
- ☐ **F** spurred

Question 9 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

After many years of feeling _____ by his senior managers, Clark was becoming hopeful of advancement..

- ☐ **A** vilified
- ☐ **B** stymied
- ☐ **C** hindered
- ☐ **D** aggrieved
- ☐ **E** circumvented
- ☐ **F** overlooked

Questions 10 to 12 are based on the following passage.

Biologists know that some marine algae can create clouds by producing the gas dimethylsulphide (DMS), which reacts with oxygen in air above the sea to form solid particles. These particles provide a surface on which water vapor can condense to form clouds. Lovelock contends that this process is part of global climatic-control system. According to Lovelock, Earth acts like a super organism, with all its biological and physical systems cooperating to keep it healthy. He hypothesized that warmer conditions increase algal activity and DMS output, seeding more clouds, which cool the planet by blocking out the Sun. Then, as the climate cools, algal activity and DMS level decrease and the cycle continues. In response to biologists who question how organisms presumably working for their own selfish ends could have evolved to behave in a way that benefits not only the planet but the organisms as well, Lovelock points out that cooling benefits the algae, which remain at the ocean surface, because it allows the cooled upper layers of the ocean to sink, and then the circulating water carries nutrients upward from the depths below. Algae may also benefit from nitrogen raining down from clouds they have helped to form.

Question 10 RC

Select one answer choice.

According to the passage, which of the following occurs as a result of cooling in the upper layers of the ocean?

- ○**A** The concentration of oxygen in the air above the ocean's surface decreases.
- ○**B** The concentration of DMS in the air above the ocean's surface increases.
- ○**C** The nutrient supply at the surface of the ocean is replenished.
- ○**D** Cloud formation increases over the ocean.
- ○**E** Marine algae make more efficient use of nutrients.

Question 11 RC

Select one answer choice.

Which of the following is most similar to the role played by marine algae in the global climate control system proposed by Lovelock?

- ○**A** A fan that continually replaces stale air in a room with fresh air from outside.
- ○**B** A thermostat that automatically controls an air-conditioning system.
- ○**C** An insulating blanket that retains heat.
- ○**D** A filter used to purify water.
- ○**E** A dehumidifier that constantly removes moisture from the air in a room.

Question 12 RC

(Highlighted portion: “benefit from nitrogen”)

Select one answer choice.

The passage mentions "benefit from nitrogen" most likely in order to

- ○**A** provide support for Lovelock's response to an objection mentioned in the passage
- ○**B** suggest that the climatic effects of DMS production have been underestimated
- ○**C** acknowledge that Lovelock's hypothesis is based in part on speculation
- ○**D** demonstrate that DMS production alters the planet in more than one way
- ○**E** assert that algae are the sole beneficiaries of DMS production

Section 2 15 Questions · 23 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

The novel contains long, boring expository tangents designed to _____ readers, encouraging them to think they are reading a serious and important book, not just a thriller.

- ○**A** stymie
- ○**B** placate
- ○**C** amuse
- ○**D** flatter
- ○**E** reprove

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

While writers on Parker often present her as an avaricious stick figure, thus making her an object of (i)_____, Nash, by contrast, gives a more (ii)_____ and sympathetic portrait of the woman.

Blank (i)	Blank (ii)
adulation	intense
praise	polemical
opprobrium	nuanced

Question 3 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

Among geophysicists there was considerably less (i) _____ the proposed environment measure than the (ii) _____ media accounts of the conference would suggest; the debate was often animated but never uncivil.

Blank (i)	Blank (ii)
ambivalence toward	sanitized
satisfaction with	sensationalized
rancor over	poignant

Question 4 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

Our contemporary preference for natural expression over artifice is (i) _____ the traditional Western view that the skill with which you expressed a position corresponded closely to the credibility of your argument. Rhetorical styles might vary, but style itself was never a matter of (ii) _____. And "style" was not just a well-turned sentence: poor expression, it was believed, (iii) _____ poor thought.

Blank (i)	Blank (ii)	Blank (iii)
a departure from	substance	ameliorated
a reflection on	indifference	elevated
an endorsement of	intention	betrayed

Questions 5 to 6 are based on the following passage.

> Typical of Argentine melodrama of the 1930s were the films starring Libertad Lamarque, the genre's biggest box-office attraction. Her most frequent role was that of the tango singer whose romance with a wealthy suitor is blocked by his elitist family. Despite its widespread social acceptance by the 1930s, tango continued to be associated in film melodramas with criminality and vice. As Diana Paladino remarks, in these films, "the tango songstress was doomed from the start." Nevertheless, if melodramatic logic dictated that Lamarque be punished for the transgressive act of singing tango, surely that judgment was not shared by the members of the audience, many of whom were drawn to her early movies precisely because of her fame as a tango singer.

Question 5 RC

Select one answer choice.

Which of the following claims about Lamarque can be inferred from the passage?

○**A** She considered herself to be primarily a tango singer rather than a movie actor.

○**B** By the end of her movie career, she was exercising considerable control over the writing and direction of her films.

○**C** Her personality differed greatly from those of the characters she portrayed in films.

○**D** Her popularity as a tango singer preceded her popularity as an actor.

○**E** She continued to act in movies after she had ceased performing as a tango singer.

Question 6 RC

Select one answer choice.

According to the author of the passage, which of the following is true about the tango?

○**A** By the time Lamarque starred in films as a tango singer, the tango was socially acceptable.

○**B** Outside Argentina the tango's reputation was quite different from what prevailed in Argentina.

○**C** The tango began to gain popularity in Argentina once it became an element in melodramatic films.

○**D** By the 1930s, no one in Argentina associated the tango with criminality and vice.

○**E** Until the 1930s, the tango was primarily thought of as a dance form rather than as a genre of song.

Questions 7 to 9 are based on the following passage.

The trader's dilemma, which typically occurs in peasant villages, arises in two contexts. First, the trader buys agricultural products in his or her village; although these products are often resold outside the village at a market, where laws of supply and demand exist and profit margins are rather limited, the trader nevertheless feels morally obliged to pay fellow villagers a good price for their products or even eventually to share profits with those villagers. Second, in his or her village shop, the trader sells imported products, but because of villagers' constrained finances must do so at reduced price, or even on credit. In both cases, the trader confronts the risk of either losing working capital or losing the respect and moral support of neighbors and kinfolk.

A classical way out of the dilemma, according to Evers, is sociocultural differentiation of peasants and traders into two separate, locally coexisting moral communities. Evers' point is theoretically significant because it implies that such differentiation may be economically rather than politically motivated. Thus, while in many societies traders are strangers, a migrant minority, it may also happen that a resident trading minority itself creates cultural distance in order to find a solution for the trader's dilemma, which thus may drive sociocultural change.

Question 7 RC

Select one answer choice.

Which of the following gives the most accurate definition of the trader's dilemma, as it is presented in the passage?

○**A** The impossibility of both remaining a part of the village's social structure and maintaining economic relations outside the village

○**B** The conflict involved in sharing profits with both fellow villagers and people outside the village

○**C** The difficulty of fulfilling both social obligations to neighbors and the economic imperatives of business

○**D** The conflict between the need as a buyer to keep prices low and the need as a seller to have customers who can afford imported goods

○**E** The difficulty of maintaining a distance from clients and customers while remaining part of their community

Question 8 RC

(Highlighted portion: "sociocultural change")

Select one answer choice.

According to the passage, the "sociocultural change" alluded to in the passage would occur as a result of

○**A** outside influences being brought to the village by villagers who travel as traders

○**B** a rejection of individual economic interests in favor of communal political interests as a motive for action

○**C** the recognition by peasant farmers that their interests were aligned with those of traders

○**D** some villagers adopting cultural practices that imitate those of migrant traders

○**E** a social segmentation within a village that reflects differentiated economic roles

Question 9 RC

(Highlighted portion: "way out of the dilemma")

Select one answer choice.

It can be inferred that the "way out of the dilemma" described by Evers works by allowing

○**A** prices to be set by a market in which there are many buyers and many sellers

○**B** people from outside the village to play the role of economic intermediary between the village and the outside world

○**C** traders to fill dissociated roles as buyers and sellers on one hand and as neighbors and members of the village's moral community on the other

○**D** villagers a greater range of options when they are selling their produce or buying supplies

○**E** a weakening of the social and cultural bonds between traders and the people from whom they buy and to whom they sell

Question 10 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Whether the film is _____ adaptation of the legend is debatable; the author of the screenplay claims that it was based on the original tale, but admits taking some interpretive license with the story.

☐**A** an inspired

☐**B** a rigorous

☐**C** an unsentimental

☐**D** a successful

☐**E** a sober

☐**F** a faithful

Question 11 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The legislators didn't merely sell out to business; they retreated to _____ style of governing whereby the interest group that is currently lobbying the hardest on an issue determines the party's position.

☐**A** a reckless

☐**B** a rigid

☐**C** a craven

☐**D** an unyielding

☐**E** an arrogant

☐**F** a cowardly

Question 12 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

For parents, the pleasure of letting children choose which book to read aloud together is not always _____; I well remembered my inner groans when my child would constantly pick my least favorite book from the shelf.

- ☐ **A** intangible
- ☐ **B** enduring
- ☐ **C** impalpable
- ☐ **D** unalloyed
- ☐ **E** ephemeral
- ☐ **F** unqualified

Question 13 is based on the following passage.

> Iridium, a hard, whitish metal similar to platinum, is extremely rare on Earth. Extremely high concentrations of iridium on Earth result from only two scenarios: massive volcanic eruptions that release iridium from deep within the Earth and meteorites that shower down on Earth from space. When scientists found concentrations of iridium 30 times higher than normal in rock stratum from 65 million years ago, they concluded that a massive meteor or comet hit the Earth and caused the massive extinction of the dinosaurs.

Question 13 CR

Select one answer choice.

Which of the following, if true, most strongly supports the scientists' conclusion?

- ○ **A** Volcanoes massive enough to generate high concentrations of iridium are very rare.
- ○ **B** Massive volcanic eruptions occurred frequently 80 million years ago.
- ○ **C** Most scientists support the hypothesis that a cosmic impact wiped out the dinosaurs.
- ○ **D** The massive extinction that occurred 70 million years ago killed not only the dinosaurs but also 70 percent of all life on Earth.
- ○ **E** A comet struck the earth some 120 million years ago, but no widespread extinction occurred.

Questions 14 to 15 are based on the following passage.

> Saturn's E ring consists of particles so small that they would be dispersed by solar radiation pressure in a few tens of thousands of years. That the ring exists today suggests, therefore, that it originated in the relatively recent past—but how? Researchers suggest that Enceladus, one of Saturn's moons, may be responsible. This icy moon has no craters, possibly because liquid water from its interior flowed across the surface in the relatively recent past, erasing all preexisting impact features. An impact into Enceladus within the past thousand years or so may have blasted liquid water into space. Water droplets would have frozen quickly into ice crystals, which may then have drifted through the Saturnian system and formed into the E ring.

Question 14 RC 복수

Consider each of the choices separately and select all that apply.

Which of the following, if true, would challenge the hypothesis presented in the passage concerning Enceladus and Saturn's E ring?

- ☐ **A** Enceladus is not the only moon orbiting Saturn.
- ☐ **B** Enceladus's lack of craters is not due to erasure by water.
- ☐ **C** No impact has occurred on Enceladus in the past few tens of thousands of years.

Question 15 RC 문장선택

Select the sentence in the passage that answers the question.

Select the sentence that points out the significance of the fact that the particles that make up Saturn's E ring are susceptible to dispersion.
