The finding that there were rock-melting temperatures on asteroids for sustained periods is puzzling: asteroids' heat source is unknown, and unlike planet-sized bodies, such small bodies quickly dissipate heat. Rubin suggests that asteroids' heat could have derived from collisions between asteroids. Skeptics have argued that a single impact would raise an asteroid's overall temperature very little and that asteroids would cool too quickly between impacts to accumulate much heat. However, these objections assumed that asteroids are dense, solid bodies. A recent discovery that asteroids are highly porous makes Rubin's hypothesis more plausible. When solid bodies collide, much debris is ejected, dissipating energy. Impacts on porous bodies generate less debris, so more energy goes into producing heat. Heat could be retained as debris fall back into impact craters, creating an insulating blanket.

The passage suggests that one factor that has made it difficult to account for the temperatures once reached by asteroids is

○**A** a miscalculation of the frequency of asteroid collisions

○**B** a misconception about asteroids' density

○**C** a mistaken assumption about what the heat source of the asteroids was

○**D** an underestimation of the rate at which small bodies lose heat

○**E** an erroneous view of how asteroids were formed

Projecting the idea of a distinctive female demand in seventeenth and eighteenth-century England was a groundbreaking departure in the history of marketing. The pioneers were the booksellers and printers who addressed specialist titles to the ladies in the 1600s, while the post-1688 print boom saw the publication of custom-designed ladies' pocket diaries, a proliferation of female manuals of all kinds, 《The Female Spectator》 in the 1740s and the long-running 《The Lady's Magazine》 from 1770. The leap to objects was made when leading furniture makers started classifying furniture by the sex, age, and specialist needs of the implied user in the new illustrated catalogs of the 1760s. Of course, sex distinctions in clothes are as old as civilization, while the idea of furniture suited to female needs is not unprecedented (think of birthing stools), but making difference systematic and concrete by means of word, image, and object was a decisive innovation. The rapid diffusion of ladies' and gentlemen's furniture suggests that gender distinctions already resonated powerfully with male and female consumers, but in the extension of the range of differentiated furniture, the projection of the trope by manufacturers thereafter, and its acceptance by consumers, conventional ideas of masculine importance and femininity delicacy were amplified and fixed. In the process, femininity was expressed in a specific and narrowly defined aesthetic register.

Whereas Carlos Bulosan aimed through fiction and personal testimony to advance both Filipino civil rights in the United States and the social transformation of the Philippines, Yen Le Espiritu has set herself the task of recovering life histories of Filipino Americans. Her work brings Filipino Americans of the generation following the 1934-1965 immigration hiatus graphically to life. A special strength is the representation of Filipino American women, who were scarce among immigrants before the 1934 American curb on Filipino immigration but composed more than half of the immigrants to America since liberalization in 1965. Espiritu's subjects document their changing sense of Filipino identity in the United States, much as Bulosan did as a member of the first substantial wave of immigrants.

The manuscripts of the eight extant Latin tragedies identify the plays as the Marci Lucii Annei Senecae Tradoediae. Since nobody of that name is known, modern scholars believe the dramas to be the work of Lucius Annaeus Seneca the Younger, the well-known philosopher, orator, and politician. Clearly, the tragedies were written during Seneca's lifetime: internal refrences to earlier poets, most notably Ovid, indicate that the dramas cannot have been composed prior to the second decade C.E., and the plays must have been written by 96 C.E., when Quintilian quotes Medea, one of the tragedies.

It is remarkable, however, that Seneca himself never mentions the plays, since there are certainly passages in them that could be used to illustrate points of his philosophy. There are at least two possible explanations. In the early Roman Empire, playwrights were sometimes exiled or executed for lines construed as directed against the emperor; thus, Seneca's silence may be simple prudence. But if anyone could safely attach his name to dramas, surely it would be Seneca, the emperor's tutor. And although Herrmann offers Seneca's modesty as an explanation, Seneca is not averse to referring to his other writings. The evidence for equating Seneca with the author of the tragedies seems circumstantial.

Because of strong overall stylistic similarities, prehistoric cave paintings in El Castillo, Spain and others in Altamira, Spain, were thought to date from the same period. Recent pigment analyses, however, established the Altamira paintings as by far the older and as about the same age as a third group of paintings done in a different overall style. Predators of herbivores can influence the structure and dynamics of plant communities in two ways: by reducing herbivore density or by modifying herbivore behavior. Whereas density-mediated effects generally affect all plants, behavioral effects often cause herbivores to change their relative use of different parts of their habitat. This can lead to a redistribution of herbivore damage on different plant species, for example, when plant-eating insects shift from preferred but risky plant species to less nutritious plants that offer refuge. A well-documented example involves predatory nursery-web spiders—a species that typically inhabits only the upper canopy of grasses. In systems where the spiders are present, grasshoppers shift their feeding activity toward ground level, thereby increasing the relative consumption of goldenrod over Kentucky bluegrass.
