답												

S2	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
답															

Section 1 12 Questions · 18 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

It is ironic that the scientist's work was criticized recently for its _____ research methodology, since other researchers have argued for years that this same methodology was based absolutely on impeccable logic.

- ○**A** fastidious
- ○**B** esoteric
- ○**C** abstruse
- ○**D** impervious
- ○**E** specious

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

Once Plowright's research is complete, she will be prepared to talk about it (i) _____, but for now, because she is discussing theories rather than facts and does not want to commit herself to an unsubstantiated claim, she prefers to make only the most (ii) _____ comments.

Blank (i)	Blank (ii)
authoritatively	provisional
tentatively	prescient
extemporaneously	germane

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

Throughout human history, religion and other areas of culture have always been (i) _____. Secularized cultural domains have often (ii) _____ religious symbols for expressing values, while religion has often drawn its symbols from (iii) _____, whether social, political, or economic.

Blank (i)	Blank (ii)	Blank (iii)
indistinguishable	critiqued	alien peoples
interchangeable	disguised	worldly contexts
interdependent	adopted	aligned sources

Questions 4 to 5 are based on the following passage.

Invasions of nonnative species are clearly reducing species diversity on a global scale. On the regional scale, these invasions cause a change in species composition, but the impact of these invasions on diversity is less certain. Changes in diversity within a region depend on the number of extinctions of native species. In some cases, broad losses of native diversity have followed the establishment of nonnative species; for example, the introduction of the brown tree snake led to the extinction of several bird species on Guam. In other cases, many nonnative species have had no detectable effects on native flora and fauna. Consequently, in regions where many nonnative species have become established without coincident extinctions, diversity has increased.

Question 4 RC

Select one answer choice.

Which of the following best describes the function of the highlighted sentence within the context of the passage as a whole?

○**A** It calls into question a distinction made in the previous sentence.

○**B** It responds to a criticism made in the previous sentence.

○**C** It helps explain an assertion made in the previous sentence.

○**D** It introduces a problem that is discussed later in the passage.

○**E** It anticipates a dispute that is discussed later in the passage.

Question 5 RC 복수

Consider each of the choices separately and select all that apply.

The author of the passage would be likely to agree with which of the following statements about the effects of invasions by nonnative species on species diversity?

☐**A** Invasions of nonnative species have led to an overall reduction in global species diversity.

☐**B** In regions where several native species have become extinct following the invasion of a nonnative species, the diversity of those regions has decreased.

☐**C** In regions where invasions of nonnative species have not led to extinctions of native species, the diversity of those regions has increased.

Question 6 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Although, in spirit at least, solar panels _____ nature and the way our biosphere harnesses the energy of our sun, the actual photosynthetic process by which plants convert sunlight into chemical energy is far more complex than solar power generation is.

☐**A** streamline

☐**B** enhance

☐**C** imitate

☐**D** exploit

☐**E** simplify

☐**F** mimic

Question 7 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Those who initially recorded American Indian oral stories often _____ them when they wrote them down; the subsequent publishers of American Indian stories, therefore, are not the first to affect the meaning.

- ☐ **A** modified
- ☐ **B** preserved
- ☐ **C** misconstrued
- ☐ **D** circulated
- ☐ **E** adapted
- ☐ **F** promulgated

Question 8 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Although collisions between the largest planetesimals in a planetesimal belt are _____, they can release large amounts of debris when they occur.

- ☐ **A** risky
- ☐ **B** exceptional
- ☐ **C** irregular
- ☐ **D** violent
- ☐ **E** rare
- ☐ **F** powerful

Question 9 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Like the detective, the biographer applies his or her powers of deduction and analysis to uncover new facts and to _____ known ones.

- ☐ **A** renounce
- ☐ **B** reconstrue
- ☐ **C** regiment
- ☐ **D** reinterpret
- ☐ **E** reject
- ☐ **F** repudiate

Questions 10 to 12 are based on the following passage.

Pueblo Bonito, the most impressive of the "great houses" at the prehistoric Chaco Canyon site in New Mexico, comprised over 600 rooms and 4 to 5 stories. Traditional interpretations have viewed the great houses as almost entirely residential, with some archaeologists estimating the population of Pueblo Bonito at 1,200. But Windes recently challenged this view by pointing out the paucity of hearths recorded during the excavation of Pueblo Bonito, which revealed only 3 upper-story hearths, in contrast to 59 ground-floor hearths: habituation rooms would have required hearths for cooking and heat. It is possible, however, that the collapse of upper-story floors disturbed evidence of upper-story hearths to such an extent that they were not revealed by early excavations such as those conducted by Pepper's field crews in the 1890s and Judd's in the 1920s. Additionally, reliance on room features for early population estimates is complicated by the Chacoan's later remodeling, especially given Judd's disinclination to destroy later structures and features to expose earlier ones. The failure of early excavations to strip off intact floors may have concealed evidence of hearths in upper-story rooms.

Question 10 RC

Select one answer choice.

The author of the passage would be most likely to agree with which of the following statements about Windes' argument?

○**A** It relies on evidence that is irrelevant to the examination of structures as large as Pueblo Bonito.

○**B** It fails to acknowledge crucial evidence from great houses other than Pueblo Bonito.

○**C** It fails to incorporate crucial evidence from excavations before the 1920s.

○**D** It is based on a false notion about the significance of hearths.

○**E** It is based on evidence that may be incomplete.

Question 11 RC

Select one answer choice.

It can be inferred from the passage that Windes would be most likely to agree with which of the following statements about room usage in Pueblo Bonito?

○**A** Upper-story rooms were rarely used as storage areas.

○**B** Rooms that were remodeled were most likely to have been residential rooms.

○**C** The majority of residential rooms were located on the ground floor.

○**D** Early excavations of Pueblo Bonito disturbed much of the evidence indicating room usage.

○**E** Upper-story rooms with hearths were probably used for different purposes than were lower story rooms with hearths.

Question 12 RC

Select one answer choice.

Which of the following can be inferred about the excavation work performed by Judd's field crew?

○**A** It did not unearth many room features that existed prior to Chacoan remodeling.

○**B** It did not unearth any evidence of upper-story hearths.

○**C** It revealed only habitation rooms.

○**D** It resulted in the collapse of some room features and upper-story floors.

○**E** It confirmed traditional population estimates for Pueblo Bonito.

Section 2 15 Questions · 23 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

Studies of hermaphroditic plants may exhibit sampling bias against self-fertilizing and cross-fertilizing species, thus inflating the frequency of species using a mixed mating system (both self-fertilizing and cross-fertilizing); nevertheless, the number of mixed-system species is not _____.

- **A** self-evident
- **B** static
- **C** trivial
- **D** relevant
- **E** calculable

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

It is often the case that a certain intellectual advantage may be found by being (i) _____ an established field of knowledge, but even if you accept the argument about the importance of (ii) _____ thinking, it is hardly the only significant thinking there is.

Blank (i)	Blank (ii)
aware of trends in	intuitive
deeply indebted to	arbitrary
on the periphery of	outsider

Question 3 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

Although the system for collecting data about user needs is called a "customer capture method," this scientific-sounding terminology connotes greater (i) _____ than the method can deliver. While this terminology de-emphasizes the (ii) _____ aspects of knowledge management processes, such elements abound in the actual data collection.

Blank (i)	Blank (ii)
neutrality	interpretive and evaluative
range	innovative and economical
flexibility	frank and impartial

Question 4 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

As theories, quantum field theory and theory of general relativity have been astonishingly (i) _____, in that no experiment yet has shown a crack in either of them, even though both of them (ii) _____ wildly counterintuitive properties in physical reality. And yet even proponents note that the two theories are (iii) _____, a fact that has disallowed theorists—at least so far—from incorporating both into a self-consistent theory of quantum gravity.

Blank (i)	Blank (ii)	Blank (iii)
successful	downplay	difficult for laypeople to understand
popular	result in	deeply at odds with each other
implausible	posit	similar to earlier physical theories

Questions 5 to 6 are based on the following passage.

Meltzoff and Moore reported experiments showing that human newborns possess the ability to imitate certain facial expressions, such as a protruding tongue or an open mouth. Yet numerous researchers challenge Meltzoff's interpretation that such neonatal imitation is the origin of later imitation, which appears at approximately eight to twelve months of age. These researchers point out that the neonatal imitative response disappears or is lessened at approximately two months. Moreover, since in follow-up studies only one type of imitative response toward a facial expression (that is, tongue protrusion) was observed, some researchers assert that neonatal imitation is not imitation at all but may simply be a form of exploratory behavior in response to interesting stimuli.

Question 5 RC

(Highlighted portion: "Meltzoff's interpretation")

Select one answer choice.

According to the passage, those who challenge "Meltzoff's interpretation" do so on the basis that it

- ○**A** implies inaccurate predictions
- ○**B** lacks testable consequences
- ○**C** assumes a discredited theory
- ○**D** leaves an unexplained gap
- ○**E** involves circular reasoning

Question 6 RC

Select one answer choice.

The passage implies which of the following about the experimental results reported by Meltzoff and Moore?

- ○**A** They were, at best, only partially borne out by subsequent studies.
- ○**B** They cast doubt on the validity of a particular claim about newborns.
- ○**C** They formed the basis for revised interpretation of other behaviors of newborns.
- ○**D** They derived from a methodology that turned out to be flawed.
- ○**E** They challenged the distinction between imitative and nonimitative behavior in newborns.

Questions 7 to 9 are based on the following passage.

Researchers suspect that meteorites (particles of matter that fall to Earth's surface from space) are pieces of asteroids, the many minor planets primarily inhabiting the region between Mars and Jupiter called the asteroid belt. The most common meteorites are ordinary chondrites-rocks containing tiny flecks of metal. By analyzing the spectrums of sunlight reflected by asteroids to determine the asteroids' chemical composition, researchers have found that most of the brighter asteroids contain the same silicates and other compounds that dominate chondrites. These silicaceous, or S-type, asteroids are the most abundant type in the inner asteroid belt, the part of the asteroid belt from which objects are most likely to escape and travel to Earth. However, S-type asteroids reflect red and infrared light much better than they reflect green, blue, and violet light, suggesting that they have a higher metal content than do ordinary chondrites. This has led at least one researcher to posit that meteorites come from other types of asteroids that are too small and too dim to be detected. However, S-type asteroids could be ordinary chondrites that have been weathered by the effects of the space environment, making them seem redder and more metallic than they really are.

Question 7 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** discuss the defining characteristics of chondrites

○**B** compare the spectrums of light reflected by chondrites and S-type asteroids

○**C** chronicle changes in the accepted interpretation of data concerning the chemical composition of asteroids

○**D** weigh evidence for and against a particular hypothesis on the origin of meteorites

○**E** question a current theory on the chemical composition of the most common type of meteorite

Question 8 RC

(Highlighted portion: "the part of the asteroid belt from which objects are most likely to escape and travel to Earth")

Select one answer choice.

The author of the passage most likely mentions that the inner asteroid belt is "the part of the asteroid belt from which objects are most likely to escape and travel to Earth" in order to

○**A** distinguish between two important sources of meteorites that travel to Earth

○**B** suggest that S-type asteroids are likely to be a source of meteorites

○**C** call into question an assumption about the compounds that dominate chondrites

○**D** explain why S-type asteroids do not reflect green, blue, and violet light as well as they reflect red and infrared light

○**E** provide evidence to support an assertion about the abundance of S-type asteroids

Question 9 RC

Select one answer choice.

It can be inferred from the passage that one reason for considering S-type asteroids to be likely sources of meteorites is that S-type asteroids

- ○**A** are brighter than other types of asteroids
- ○**B** are the most common type of asteroid throughout the asteroid belt
- ○**C** reflect red and infrared light better than they reflect green, blue, and violet light
- ○**D** contain the same silicates and other compounds that dominate chondrites
- ○**E** are the only type of asteroid found in the inner asteroid belt

Question 10 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Although automated agricultural technology boosts yields and profits, its high degree of prescriptiveness diminishes the role of individual farmers by making their _____ almost irrelevant.

- ☐**A** diligence
- ☐**B** integrity
- ☐**C** judgment
- ☐**D** foresight
- ☐**E** discretion
- ☐**F** honesty

Question 11 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Researchers studying India's monsoon weather have evaluated more than 100 years of rain gauge data; _____ such information, South American scientists are forced to reconstruct centuries of monsoon history by analyzing lake-bottom sediment cores.

- ☐**A** verifying
- ☐**B** lacking
- ☐**C** utilizing
- ☐**D** employing
- ☐**E** wanting
- ☐**F** confirming

Question 12 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Although technically their members were hunter-gatherers, many early Native California communities exhibited traits more typically associated with well-developed agrarian societies and, therefore, are often presented in the ethnographic literature as _____.

- ☐ **A** archaic
- ☐ **B** pragmatic
- ☐ **C** anomalous
- ☐ **D** exemplary
- ☐ **E** exceptional
- ☐ **F** utilitarian

Question 13 is based on the following passage.

> In Stanton the average number of people injured per automobile accident is consistently higher for accidents involving a taxicab than for those not involving a taxicab. Although all Stanton taxicabs are equipped with passenger seat belts, taxicab drivers report that passengers tend not to use them. It is likely, therefore, that if taxicab passengers were required to use seat belts, the number of people injured per accident would soon be no higher for taxicabs than for other automobiles.

Question 13 CR

Select one answer choice.

Which of the following, if true about Stanton, most seriously weakens the argument?

- ○ **A** The number of automobile accidents has been declining in recent years.
- ○ **B** Since taxicabs are driven more miles annually than most other vehicles, they are more likely to be in an accident during any given year than is the average vehicle.
- ○ **C** There are more taxicabs in operation, relative to the overall number of motor vehicles, than there are in most cities of Stanton's size.
- ○ **D** The number of people, including the driver, who occupy a vehicle is generally greater for taxicabs than for other vehicles.
- ○ **E** Not all passengers in automobiles other than taxicabs use seat belts.

Questions 14 to 15 are based on the following passage.

Though respectful of the groundbreaking work in translating Native American oral narratives done by Dell Hymes and Dennis Tedlock in the 1970s, Robert Parker notes that their work emerged when "Romanticized ideas of 'the Indian' ... and of poetry" converged to create a surprisingly uncritical reception of their claim that Native American stories are in fact poetry. Parker objects that by claiming to discover poetry as the true nature of Native American narrative and asserting the value of such narrative on that ground, Hymes and Tedlock "misconstrue the social relation between power, genre, and value." Parker's own position is that Native American literature, on its own terms, matches the best canonical literature in the European tradition and need not be validated by that tradition's notions of value.

Question 14 RC

Select one answer choice.

According to Parker, when Hymes and Tedlock argued for the value of the Native American narratives, they based that claim on the value that the European tradition places on

○**A** poetry

○**B** truth

○**C** literature

○**D** ideas

○**E** narratives

Question 15 RC 복수

Consider each of the choices separately and select all that apply.

The author of the passage suggests that Parker would agree with which of the following statements about the work done by Hymes and Tedlock?

☐**A** It made a significant contribution toward making Native Amenican narratives accessible to a broader readership.

☐**B** Some of its features might have been more vigorously questioned if it had appeared at a different time.

☐**C** It creates a misleading impression of Native American oral narratives in general because of the selections on which they chose to work.
