Section 1 12 Questions · 18 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

The chairman, faced with the need to forge a consensus on a number of proposals, acknowledged that it would be difficult to reconcile the push for a radical overhaul with the stance of those who want _____ change.

- ○**A** deliberate
- ○**B** indiscriminate
- ○**C** genuine
- ○**D** immediate
- ○**E** wholesale

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

It is possible that the earliest terrestrial plants were (i) _____ natural enemies, such as herbivores. By the mid-Carboniferous period, however, there was abundant evidence—in the form of fossil leaves with signs of bite marks—that plants were (ii) _____ animal attack.

Blank (i)	Blank (ii)
free from	experiencing
influenced by	avoiding
overwhelmed by	exploiting

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

The perennial problem for critics of nineteenth-century novelist Charlotte Yonge is the relationship of her realism to her (i) _____. While admiring her complex psychological portraits and detailed descriptions of quotidian family life, readers since her own time have tended to fault her improbable manipulation of plot to teach a moral lesson. Indeed, many critics (ii) _____ her because of her willingness to (iii) _____.

Blank (i)	Blank (ii)	Blank (iii)
pessimism	dismiss	squander suspense
didacticism	applaud	sacrifice credibility
eclecticism	underestimate	deflate pretension

Questions 4 to 5 are based on the following passage.

Historical demographers have generally agreed on two interrelated features of the urban populations in early-modern Germany. First in accordance with the law of natural decrease, extremely high mortality rates in cities (urban areas with more than 10,000 inhabitants) meant that their populations could not be sustained by reproduction alone. Population density, inadequate sanitary conditions, and poor housing made cities too vulnerable to disease and death. Second, when city populations did increase, it was as a result of in-migration sufficient to overcome the population losses caused by the high mortality. But because the parish registers of urban communities with fewer than 10,000 inhabitants show that the annual number of births usually equaled or exceeded that of deaths, historical demographers assume that the law of natural decrease did not apply to small towns.

Question 4 RC

Select one answer choice.

The author suggests that according to historical demographers, the birth rate in early-modern German cities

○**A** was affected by sanitary conditions

○**B** increased as a result of in-migration

○**C** was lower than the annual death rate

○**D** decreased as population density increased

○**E** was lower than the rate in communities with fewer than 10,000 inhabitants

Question 5 RC 복수

Consider each of the choices separately and select all that apply.

It can be inferred that historical demographers generally believe which of the following about communities of fewer than 10,000 people in early-modern Germany?

☐**A** Mortality rates were lower than those in cities of over 10,000 inhabitants.

☐**B** In-migrations were not a significant factor in population trends.

☐**C** Population levels remained quite stable for extended periods.

Question 6 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Although the claim that no one knows what dark matter is remains _____, some scientists dispute the parallel assertion that dark matter has not been detected.

☐**A** contentious

☐**B** sound

☐**C** questionable

☐**D** unassailable

☐**E** unverifiable

☐**F** prominent

Question 7 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

It's hardly _____ the committee calls for: rudimentary competence would be an improvement on the current chaos.

- ☐ **A** accountability
- ☐ **B** disarray
- ☐ **C** unruliness
- ☐ **D** faultlessness
- ☐ **E** loyalty
- ☐ **F** perfection

Question 8 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

People enjoy listening to the governor's inspiring speeches, and his eloquence lulls his adversaries into underestimating his _____, the tempered steel beneath the sleek suits.

- ☐ **A** tenacity
- ☐ **B** resolve
- ☐ **C** resourcefulness
- ☐ **D** kindness
- ☐ **E** compassion
- ☐ **F** frankness

Question 9 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The _____ of the folktales in this collection does not inhibit the conveyance of important lessons; indeed, the didactic effect would be lost if the stories were more protracted.

- ☐ **A** gaiety
- ☐ **B** simplicity
- ☐ **C** whimsy
- ☐ **D** brevity
- ☐ **E** sobriety
- ☐ **F** economy

Questions 10 to 12 are based on the following passage.

"Flight-Initiation Distance" (FID) is the distance at which birds flee from an approaching human. Birds adjust their FIDs in relation to a range of factors, including body mass, encounter rates with stimuli, and aspects of the stimulus such as starting distance (the distance at which a human approach begins), stimulus type (e.g., vehicle or walker), proximity to refuge, directness and speed of approach. The ability to discriminate between stimuli within species demonstrates that cognition is involved in the specifics of bird escape, and the substantial cognitive ability of at least some birds has recently been highlighted. Accurate judgment of risk, and appropriate mediation of response, is likely to be critical for the survival of many birds that encounter potentially threatening stimuli such as humans in increasing numbers and places. The "cognitive buffer" hypothesis suggests larger-brained birds will be better able to adapt to novel environmental conditions, such as those created by anthropogenic landscape change. In theory, these birds may be able to more accurately judge risk when presented with a stimulus, or be able to learn (habituate or sensitize) to adjust responses appropriately based on their previous experience. If so, one would predict that there would be a negative association between FID and brain size within and across species.

Question 10 RC

Select one answer choice.

The primary purpose of the passage is to

○**A** describe some adaptations of birds to environmental changes caused by humans

○**B** challenge the role of brain size in birds' behavioral responses to potential threats

○**C** argue that cognitive ability may be more useful than measures of escape behavior in predicting the survival of birds

○**D** examine the link between brain size and escape behavior in birds

○**E** explore a possible correlation between escape behavior and survival of birds encountering humans

Question 11 RC 복수

(Highlighted portion: "If so, one would predict that there would be a negative association between FID and brain size within and across species.")

Consider each of the choices separately and select all that apply.

Which of the following statements, if true, would confirm the prediction made in the final sentence of the passage?

☐**A** Birds with larger brains tend to allow humans to approach more closely before fleeing than do smaller-brained birds.

☐**B** Birds of the same species tend to have the same FID regardless of brain size.

☐**C** Birds with smaller brains become habituated more quickly to the presence of humans than do larger-brained birds.

Question 12 RC

Select one answer choice.

The passage suggests that birds with an invariably long FID are

○**A** likely to adapt effectively to anthropogenic landscape change

○**B** less likely to accurately judge risk in anthropogenic environments

○**C** unlikely to flee approaching humans so long as the humans approach slowly

○**D** more likely to flee an approaching vehicle than a person on foot

○**E** likely to benefit from interactions with humans

Section 2 15 Questions · 23 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

Among the Meakambut people of Papua New Guinea, legends are associated with specific caves in the Sepik region, and these legends are _____: only the cave owner can share its secrets.

- ○**A** impenetrable
- ○**B** immutable
- ○**C** proprietary
- ○**D** didactic
- ○**E** self-perpetuating

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

The enthusiasm for dancing in New Zealand during the 1920s and 1930s to some extent (i) _____ in both the United States and Britain, where new dance halls (ii) _____ in response to customer demand, although the rampant commercialization associated with larger populations in the United States was not so apparent in New Zealand.

Blank (i)	Blank (ii)
heralded its decline	foundered
bucked trends	burgeoned
mirrored its popularity	rebounded

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

It is true that with too much exposure, one can weary of visionary poems; their rhetoric can become (i) _____. And yet, there are few among us who are completely (ii) _____ visionary rhetoric for the obvious reason that we do, on rare occasions, have an experience that (iii) _____ and leaves us baffled, deeply moved, and ready to believe things we hadn't dreamed of.

Blank (i)	Blank (ii)	Blank (iii)
engaging	immune to	passes by unnoticed
insufferable	immersed in	lifts us out of the ordinary
prescient	comfortable with	fits all expectations

Question 4 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

A certain (i) _____ governs the way most of us think about routines. A routine is sometimes conceived as constraining—a self-made prison of inflexible habits that prevent people from changing their lives. But routine is also seen as (ii) _____: activities that become routine (iii) _____, allowing us to expend energy on other things.

Blank (i)	Blank (ii)	Blank (iii)
pessimism	liberating	are often tedious
misunderstanding	alterable	demand less attention
polarity	unintentional	encourage personal discipline

Questions 5 to 6 are based on the following passage.

Because Chopin concentrated on musical genres considered trivial—nocturnes, mazurkas, waltzes—critics labeled him a miniaturist. This view of Chopin, which remained orthodox into the later twentieth century, is now largely discredited. Many of Chopin's large works—such as scherzos and sonatas—are longer than an average movement of Beethoven. Chopin was, in fact, the only composer of his generation who never, after the age of twenty-one, wrote a long piece that was ineffective. There are deserts with few oases in a number of works of Berlioz; and not many works of Liszt are completely exempt from some facile pages. But the elegance, distinction, and efficacy of Chopin's large forms are almost unique for the time in their success.

Question 5 RC

Select one answer choice.

The passage suggests which of the following about Chopin?

○**A** He wrote more scherzos and sonatas than did other composers of his generation.

○**B** He has a better reputation today than he had prior to the twentieth century.

○**C** He was less interested in such genres as nocturnes, mazurkas, and waltzes than was once assumed.

○**D** His reputation as a miniaturist was regarded by other composers of his time as misleading.

○**E** His ability to write large works declined after the age of twenty-one.

Question 6 RC

Select one answer choice.

The author would most likely agree with which of the following statements about Berlioz and Liszt?

○**A** Their longer works are generally less successful than their shorter ones.

○**B** Their works rarely achieve the elegance of Chopin's best nocturnes.

○**C** Their large works are not as consistent as are the large works of Chopin.

○**D** Their compositions show that they borrowed from Chopin but not very successfully.

○**E** Their compositions have more in common with music that has been considered miniaturist than many critics have recognized.

Questions 7 to 9 are based on the following passage.

Lichens consist of a fungus and an alga living in symbiotic union. Testing the widely held hypothesis that lichen-forming fungi are a closely knit, peripheral group of fungi, a team of scientists compared DNA sequences from 10 lichen-forming and 65 non-lichen-forming fungus species. These scientists classified the lichen-forming fungi into five kinds that were more closely related to kinds of non-lichen-forming fungi than to one another. The closest relatives of the lichen-forming kinds included some fungi that benefit, and others that cause disease to, associated organisms. Therefore, lichen-forming fungi probably evolved from various species whose effects on associated organisms ranged from benign to malignant. Furthermore, lichen-forming fungi seem to have given rise to other fungi that act as harmful parasites on lichens themselves. These considerations undermine the long-standing hypothesis that symbiotic relationships normally evolve in an orderly progression from those that are harmful to one partner to those that are mutually beneficial.

Question 7 RC

Select one answer choice.

The primary concern of the passage is to

- ○**A** articulate objections to a new hypothesis
- ○**B** support widely held hypotheses with new evidence
- ○**C** reconcile seemingly incompatible hypotheses
- ○**D** provide evidence against some widely held hypotheses
- ○**E** summarize the evidence for a long-held hypothesis

Question 8 RC

(Highlighted portion: "harmful parasites on lichens themselves")

Select one answer choice.

The author refers to "harmful parasites on lichens themselves" in order to

- ○**A** suggest the effects of lichen-forming fungi on algae with which they live symbiotically
- ○**B** indicate the prevalence of symbiotic relationships across a wide variety of species
- ○**C** describe the evolutionary origins of lichen-forming fungi
- ○**D** provide evidence against the hypothesis described in the second sentence of the passage
- ○**E** provide evidence against the hypothesis described in the final sentence of the passage

Question 9 RC

Select one answer choice.

Which of the following statements about lichen-forming fungi can be inferred from the passage?

○**A** Some of the evolutionary ancestors of these kinds of fungi probably were involved in symbiotic relationships that were not mutually beneficial.

○**B** Some of these kinds of fungi are now involved in symbiotic relationships that are harmful to lichens themselves.

○**C** These kinds of fungi probably are relatively distant relations of certain disease-causing fungi.

○**D** These kinds of fungi probably have evolved from fungi that are parasitic on lichens themselves.

○**E** These kinds of fungi are probably more closely related to each other than to non-lichen-forming fungi.

Question 10 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The rebellion was _____ one, driven less by ardor than by reason and calculation.

☐**A** a cerebral

☐**B** a dispassionate

☐**C** a rash

☐**D** an idealistic

☐**E** a cautious

☐**F** a reckless

Question 11 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The museum's display of bandolier bags made by Ojibwa artists of the Mille Lacs community reinforces the idea that this community's culture is _____ one: early twentieth-century bandolier bags are displayed alongside others made recently.

☐**A** a historic

☐**B** an inventive

☐**C** an unfolding

☐**D** a living

☐**E** a resourceful

☐**F** a unique

Question 12 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Family photos of the author suggest that she was _____ child: she seemed to wear a permanent frown.

- ☐ **A** a sullen
- ☐ **B** an amiable
- ☐ **C** a surly
- ☐ **D** a beautiful
- ☐ **E** a prudent
- ☐ **F** a stunning

Question 13 is based on the following passage.

> A year ago, the government of Portran predicted that Torre City would experience strong net job growth for the following year but that Glanville, Portran's other major city, would not. Events have clearly proved otherwise, however; in Torre City, but not in Glanville, the number of people who are unemployed is greater now than it was a year ago.

Question 13 CR

Select one answer choice.

Which of the following is an assumption on which the editorial's argument depends?

- ○ **A** The unemployment rate is higher in Torre City than in Glanville.
- ○ **B** The unemployment rate in Torre City is higher now than it has ever been.
- ○ **C** Since making the prediction a year ago, the government of Portran has taken no steps to improve job growth in the country.
- ○ **D** Few, if any, unemployed people moved to Torre City from Glanville during the year.
- ○ **E** Government predictions about the economy in Portran are generally not reliable.

Questions 14 to 15 are based on the following passage.

> Findings in biological anthropology suggest that Native Americans' ancestors probably came to the Americas from northeastern Asia. Turner, for example, has studied the dentition of prehistoric and living Native Americans and northeastern Asians. Based on approximately twenty dental traits, including tooth-crown shape and number of roots, he has defined an overall dental pattern called Sinodonty, which includes three-rooted lower first molars and shovel-shaped incisors. This distinctive pattern is shared among most Native Americans and people from northeastern Asia, but is not found in people who originated in southern Asia, Africa, or Europe. Another less complex pattern—Sundadonty—is shared among the people of southeastern Asia and is also found in prehistoric American populations, but Turner believes that widespread Sinodonty demonstrates most Native Americans' northeastern Asian origins.

Question 14 RC 복수

Consider each of the choices separately and select all that apply.

The passage implies that Turner's conclusion regarding the origins of most Native American populations is based in part on which of the following findings?

- ☐ **A** The presence of Sundadonty among prehistoric American populations
- ☐ **B** The prevalence of shovel-shaped incisors among Native Americans
- ☐ **C** The absence of Sinodonty among people from southern Asia, Africa, and Europe

Question 15 RC 복수

Consider each of the choices separately and select all that apply.

According to the passage, Sinodonty and Sundadonty differ from one another in that Sinodonty

- ☐ **A** has been found among prehistoric Native American populations, while Sundadonty has not
- ☐ **B** is a more complex dental pattern than Sundadonty is
- ☐ **C** occurs frequently in modern Native American populations, while Sundadonty does not
