The chairman, faced with the need to forge a consensus on a number of proposals, acknowledged that it would be difficult to reconcile the push for a radical overhaul with the stance of those who want _____ change.

○**A** deliberate
○**B** indiscriminate
○**C** genuine
○**D** immediate
○**E** wholesale

해설
핵심 단서: 'reconcile A with B' — A(radical overhaul, 급진적 전면 개혁)와 B가 조화시키기 어렵다 = 서로 반대 입장.
빈칸 = radical의 반대, 즉 '천천히, 신중하게 진행되는' 변화.
deliberate는 '신중한, 서두르지 않는'이라는 뜻으로 급진적 개혁과 정확히 대비된다.
정답: A (deliberate)

⚠ **함정 / 오답 포인트**
wholesale(전면적인)·indiscriminate는 radical overhaul과 같은 방향이라 '조화시키기 어려운' 대립 구도가 성립하지 않는다.
immediate도 급진 쪽에 가깝다.

단어

Historical demographers have generally agreed on two interrelated features of the urban populations in early-modern Germany. First in accordance with the law of natural decrease, extremely high mortality rates in cities (urban areas with more than 10,000 inhabitants) meant that their populations could not be sustained by reproduction alone. Population density, inadequate sanitary conditions, and poor housing made cities too vulnerable to disease and death. Second, when city populations did increase, it was as a result of in-migration sufficient to overcome the population losses caused by the high mortality. But because the parish registers of urban communities with fewer than 10,000 inhabitants show that the annual number of births usually equaled or exceeded that of deaths, historical demographers assume that the law of natural decrease did not apply to small towns.

The author suggests that according to historical demographers, the birth rate in early-modern German cities

○**A** was affected by sanitary conditions

○**B** increased as a result of in-migration

○**C** was lower than the annual death rate

○**D** decreased as population density increased

○**E** was lower than the rate in communities with fewer than 10,000 inhabitants

It can be inferred that historical demographers generally believe which of the following about communities of fewer than 10,000 people in early-modern Germany?

- ☐ **A** Mortality rates were lower than those in cities of over 10,000 inhabitants.
- ☐ **B** In-migrations were not a significant factor in population trends.
- ☐ **C** Population levels remained quite stable for extended periods.

해설

도시: 사망률이 극도로 높아 출생만으로 유지 불가(natural decrease 적용).

소도시: 'the annual number of births usually equaled or exceeded that of deaths' → natural decrease가 적용되지 않는다고 봄.

도시의 문제가 '극도로 높은 사망률'이었으므로, 학자들은 소도시의 사망률이 도시보다 낮았다고 본다고 추론 가능 → A.

B(이민이 중요하지 않음), C(인구가 오래 안정)는 지문에 근거 없음.

정답: A

⚠ **함정 / 오답 포인트**

C: 출생 ≥ 사망이면 인구가 안정적일 것 같지만, 출생이 사망을 '초과'할 수도 있고 이주 등 다른 요인도 있어 '안정'까지는 추론 불가.

"Flight-Initiation Distance" (FID) is the distance at which birds flee from an approaching human. Birds adjust their FIDs in relation to a range of factors, including body mass, encounter rates with stimuli, and aspects of the stimulus such as starting distance (the distance at which a human approach begins), stimulus type (e.g., vehicle or walker), proximity to refuge, directness and speed of approach. The ability to discriminate between stimuli within species demonstrates that cognition is involved in the specifics of bird escape, and the substantial cognitive ability of at least some birds has recently been highlighted. Accurate judgment of risk, and appropriate mediation of response, is likely to be critical for the survival of many birds that encounter potentially threatening stimuli such as humans in increasing numbers and places. The "cognitive buffer" hypothesis suggests larger-brained birds will be better able to adapt to novel environmental conditions, such as those created by anthropogenic landscape change. In theory, these birds may be able to more accurately judge risk when presented with a stimulus, or be able to learn (habituate or sensitize) to adjust responses appropriately based on their previous experience. If so, one would predict that there would be a negative association between FID and brain size within and across species.

Because Chopin concentrated on musical genres considered trivial—nocturnes, mazurkas, waltzes—critics labeled him a miniaturist. This view of Chopin, which remained orthodox into the later twentieth century, is now largely discredited. Many of Chopin's large works—such as scherzos and sonatas—are longer than an average movement of Beethoven. Chopin was, in fact, the only composer of his generation who never, after the age of twenty-one, wrote a long piece that was ineffective. There are deserts with few oases in a number of works of Berlioz; and not many works of Liszt are completely exempt from some facile pages. Lichens consist of a fungus and an alga living in symbiotic union. Testing the widely held hypothesis that lichen-forming fungi are a closely knit, peripheral group of fungi, a team of scientists compared DNA sequences from 10 lichen-forming and 65 non-lichen-forming fungus species. These scientists classified the lichen-forming fungi into five kinds that were more closely related to kinds of non-lichen-forming fungi than to one another. The closest relatives of the lichen-forming kinds included some fungi that benefit, and others that cause disease to, associated organisms. Therefore, lichen-forming fungi probably evolved from various species whose effects on associated organisms ranged from benign to malignant. Furthermore, lichen-forming fungi seem to have given rise to other fungi that act as harmful parasites on lichens themselves. These considerations undermine the long-standing hypothesis that symbiotic relationships normally evolve in an orderly progression from those that are harmful to one partner to those that are mutually beneficial.

○**E** summarize the evidence for a long-held hypothesis

해설
지문은 두 가설을 반박: (1) 'widely held hypothesis that lichen-forming fungi are a closely knit, peripheral group' — DNA 결과 서로보다 비지의류 곰팡이와 더 가까움. (2) 'long-standing hypothesis' 공생이 해로움→상호이익 순서로 진화 — 'These considerations undermine'.
= 널리 받아들여진 가설들에 반하는 증거 제시.
정답: D

⚠ **함정 / 오답 포인트**
A: 반박 대상은 '새로운' 가설이 아니라 오래되고 널리 받아들여진 가설이다. B는 방향이 반대.

단어

Which of the following statements about lichen-forming fungi can be inferred from the passage?

○**A** Some of the evolutionary ancestors of these kinds of fungi probably were involved in symbiotic relationships that were not mutually beneficial.

○**B** Some of these kinds of fungi are now involved in symbiotic relationships that are harmful to lichens themselves.

○**C** These kinds of fungi probably are relatively distant relations of certain disease-causing fungi.

○**D** These kinds of fungi probably have evolved from fungi that are parasitic on lichens themselves.

○**E** These kinds of fungi are probably more closely related to each other than to non-lichen-forming fungi.

해설

- ☐ **A** a cerebral
- ☐ **B** a dispassionate
- ☐ **C** a rash
- ☐ **D** an idealistic
- ☐ **E** a cautious
- ☐ **F** a reckless

해설
쉼표 뒤 설명: 'driven less by ardor(열정) than by reason and calculation(이성과 계산)'.
빈칸 = 감정이 아닌 이성 중심 → cerebral(지적인, 이성적인), dispassionate(냉정한).
정답: A, B

⚠ **함정 / 오답 포인트**
cautious(신중한)는 'calculation'과 연결돼 끌리지만, 핵심은 '감정 vs 이성' 대비이지 '신중함'이 아니며 짝도 없다.
rash·reckless는 서로 짝이지만 의미가 반대.

단어
cerebral 지적인, 이성적인 · **dispassionate** 냉정한, 감정에 치우치지 않는 · **rash** 경솔한 · **idealistic** 이상주의적인 · **cautious** 신중한 · **reckless** 무모한

A year ago, the government of Portran predicted that Torre City would experience strong net job growth for the following year but that Glanville, Portran's other major city, would not. ○**A** The unemployment rate is higher in Torre City than in Glanville.

○**B** The unemployment rate in Torre City is higher now than it has ever been.

○**C** Since making the prediction a year ago, the government of Portran has taken no steps to improve job growth in the country.

○**D** Few, if any, unemployed people moved to Torre City from Glanville during the year.

○**E** Government predictions about the economy in Portran are generally not reliable.

해설
결론: 정부 예측(Torre City 순고용 증가)은 틀렸다. 근거: Torre City의 실업자 '수'가 1년 전보다 늘었다.
빈틈: 실업자 수는 일자리 감소가 아니라 '실업자 유입'으로도 늘 수 있다.
D: Glanville에서 Torre City로 실업자가 거의 이주하지 않았다 → 이 대안 설명을 차단하는 필수 가정(부정하면 논증 붕괴).
정답: D

A: 두 도시의 실업률 '수준' 비교는 논증과 무관하다(논증은 각 도시의 변화량에 대한 것). E: 예측 전반의 신뢰성은 필요 없다.

단어
net job growth 순 일자리 증가 · **assumption** 가정 · **unemployment rate** 실업률

Findings in biological anthropology suggest that Native Americans' ancestors probably came to the Americas from northeastern Asia. Turner, for example, has studied the dentition of prehistoric and living Native Americans and northeastern Asians. Based on approximately twenty dental traits, including tooth-crown shape and number of roots, he has defined an overall dental pattern called Sinodonty, which includes three-rooted lower first molars and shovel-shaped incisors. This distinctive pattern is shared among most Native Americans and people from northeastern Asia, but is not found in people who originated in southern Asia, Africa, or Europe. Another less complex pattern—Sundadonty—is shared among the people of southeastern Asia and is also found in prehistoric American populations, but Turner believes that widespread Sinodonty demonstrates most Native Americans' northeastern Asian origins.

Consider each of the choices separately and select all that apply.

The passage implies that Turner's conclusion regarding the origins of most Native American populations is based in part on which of the following findings?

- ☐ **A** The presence of Sundadonty among prehistoric American populations
- ☐ **B** The prevalence of shovel-shaped incisors among Native Americans
- ☐ **C** The absence of Sinodonty among people from southern Asia, Africa, and Europe

해설
Turner의 결론: 대부분 아메리카 원주민의 기원은 북동아시아. 근거: Sinodonty(삽 모양 앞니 포함)가 대부분 원주민과 북동아시아인에게 공유됨.
B: 'shovel-shaped incisors'는 Sinodonty의 특징 → 근거.
C: 'not found in people who originated in southern Asia, Africa, or Europe' → 다른 지역 기원을 배제하는 근거.
A: Sundadonty는 오히려 결론에 불리한 사실('but Turner believes...').
정답: B, C

⚠ **함정 / 오답 포인트**
A: 지문에 나온 사실이지만 'but'로 Turner가 그것에도 불구하고 결론을 유지했음을 보여주므로 근거가 아니다.

단어
dentition 치열 · **incisor** 앞니 · **molar** 어금니 · **prehistoric** 선사 시대의

Consider each of the choices separately and select all that apply.

According to the passage, Sinodonty and Sundadonty differ from one another in that Sinodonty

- ☐ **A** has been found among prehistoric Native American populations, while Sundadonty has not
- ☐ **B** is a more complex dental pattern than Sundadonty is
- ☐ **C** occurs frequently in modern Native American populations, while Sundadonty does not

해설
B: Sundadonty는 'Another less complex pattern' → Sinodonty가 더 복잡 (명시).
C: Sinodonty는 'shared among most Native Americans'인 반면, Sundadonty는 동남아시아인에게 공유되고 '선사 시대' 아메리카 집단에서 발견된다고만 함 → 현대 원주민에게는 흔하지 않다는 대비.
A: Sundadonty도 'also found in prehistoric American populations' → 틀림.
정답: B, C

⚠ **함정 / 오답 포인트**
A: Sinodonty가 선사 시대 원주민에게 있다는 점은 맞지만, 'Sundadonty는 없다'는 부분이 지문과 정면으로 모순된다.

단어
complex 복잡한 · **prevalence** 널리 퍼짐 · **originate** 기원하다
