Section 1 12 Questions · 18 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

The mating system of humpback whales appears to rely on _____: although humpbacks are found in widely varying densities throughout any winter breeding range, they frequently return in large numbers to specific locations.

- ○**A** competition
- ○**B** aggregation
- ○**C** courtship
- ○**D** adaptability
- ○**E** innovation

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

Although Kito Hiroshi's portrait of Edo Japan as (i)_____ is certainly (ii)_____, the fundamental factors of population stability and resource renewal generally did favor social maintenance and even economic growth.

Blank (i)	Blank (ii)
outwardly aggressive	derivative
perfectly harmonious	positive
slowly developing	overdrawn

Question 3 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

The potential (i) _____ exploiting mineral resources in the area combined with (ii) _____ participation among local people in conservation efforts may lead to a (iii) _____ human appreciation for the landscape and eventually contribute to disadvantageous effects for conservation.

Blank (i)	Blank (ii)	Blank (iii)
rewards in	an increase of interest in	rise in
ban on	a lack of benefits for	shrinkage of
danger in	a shift in the direction of	dependency on

Questions 4 to 5 are based on the following passage.

In the late 1970s, bird populations were found to be declining in India's Bharatpur Bird Sanctuary in Rajasthan. Grazing cattle and buffalo were the suspected culprits: they were entering the preserve in sufficient numbers to disrupt what was believed to be an otherwise balanced ecosystem. Accordingly, grazing was banned in Bharatpur. Yet by the mid-1980s, studies found that bird diversity within the preserve had declined further since the ban, and it continued to plummet. The absence of grazing animals, it turns out, had disturbed the park's ecology. Weed species were taking over wetlands and choking canals, thereby reducing the fish populations that had once attracted so many birds, and avian species then went elsewhere in search of more suitable nesting places.

Question 4 RC

(Highlighted portion: "fish populations")

Select one answer choice.

The passage suggests which of the following about the "fish populations"?

○**A** They were more diverse in the late 1970s than observers recognized at the time.

○**B** They were more adversely affected by the growth of vegetation after the ban on grazing than by avian predation.

○**C** They required a habitat that could not be sustained without measures to limit animal grazing.

○**D** They proliferated following changes to Bharatpur's ecosystem introduced by the ban on grazing.

○**E** They migrated to habitats that were inhospitable to grazing cattle and buffalo.

Question 5 RC

(Highlighted portion: "Weed species")

Select one answer choice.

Which of the following statements, if true, would best explain the changes in "weed species"?

○**A** The species were not native to Bharatpur but spread rapidly once they were introduced.

○**B** The species had been kept in check by the large avian populations that once nested in Bharatpur.

○**C** The species were among the preferred forage plants grazed on by cattle and buffalo.

○**D** The species were necessary for maintaining suitable habitats for fish populations in Bharatpur's wetlands.

○**E** The species were unable to tolerate changing water conditions in the canals of Bharatpur.

Question 6 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The article has been abridged for presentation to a nonspecialist audience, and the _____ by which this has been accomplished can be frustrating for any reader trying to reconstruct the argument in detail.

- ☐ **A** elisions
- ☐ **B** expedients
- ☐ **C** elaborations
- ☐ **D** conflations
- ☐ **E** omissions
- ☐ **F** annotations

Question 7 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

It is true that propagandists spout misinformation to serve their own ends, but if our minds were _____ such garbage, the lies would die out quickly.

- ☐ **A** inhospitable to
- ☐ **B** amenable to
- ☐ **C** unreceptive to
- ☐ **D** unaffected by
- ☐ **E** distorted by
- ☐ **F** governable by

Question 8 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Biologists agree that snakes descended from lizards, but exactly where this first happened has been a matter of debate since the 1800s, when two _____ theories emerged.

- ☐ **A** complex
- ☐ **B** competing
- ☐ **C** dubious
- ☐ **D** conclusive
- ☐ **E** contending
- ☐ **F** irrefutable

Question 9 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

The capacity for rational thought and its manifestation in language have long been assumed to distinguish human from nonhuman animals, but apes' proven ability to learn and teach sign language to other apes suggests that such a strict human-animal divide is _____.

- ☐ **A** indeterminable
- ☐ **B** indefensible
- ☐ **C** untenable
- ☐ **D** intolerable
- ☐ **E** inevitable
- ☐ **F** unavoidable

Questions 10 to 12 are based on the following passage.

Given that ants and aphids are both abundant insect groups that often share the same habitats, that aphids excrete energy-rich honeydew, and that ants aggressively defend resources, it is difficult to understand why so few species of aphid have evolved a close relationship with ants. For example, only a quarter of the aphid species in the Rocky Mountain region are attended by ants, and in Central Europe, about one third are obligate myrmecophiles (animals that closely associate with ants). More than a dozen hypotheses have been proposed to account for the variability in aphid-ant relationships and the low proportion of attended species. First among them is the plant permissive hypothesis, which suggests that host-plant quality plays a critical role in determining the attractiveness of aphids for ants. Both variation in the quality of different hosts or different parts of the same host plant may affect the quality of honeydew, which is either more or less attractive to ants. However, this hypothesis ignores the fact that several species of aphids may feed on the same host plant or even plant organ but have very different degrees of associations with ants and assumes that the quality of phloem sap determines that of the honeydew. Recent studies have found that feeding on woody plant parts is positively associated with ant attendance, whereas mobility, feeding in isolation, and having winged adults are negatively associated with ant attendance.

Question 10 RC

Select one answer choice.

Which of the following, if true, would best support the plant permissive hypothesis?

- ○ **A** Aphids that feed on different species of plants produce honeydew of varying quality.
- ○ **B** Seasonal changes in the quality of phloem sap are a common phenomenon in plants.
- ○ **C** Many aphid species with extremely nutritious honeydew are not attended by ants.
- ○ **D** Some species of aphids inhabit more than one species of plant.
- ○ **E** The Rocky Mountain region and Central Europe have few plant species in common.

Question 11 RC

Select one answer choice.

Which of the following best describes the function of the highlighted sentence in the context of the passage as a whole?

○**A** It presents empirical data that will be used to support a claim stated later in the passage.

○**B** It summarizes the discussion about similarities between two regions earlier in the passage.

○**C** It points to a key factor that is commonly overlooked by study of ant-aphid interactions.

○**D** It elaborates on an explanation that will be faced with several objections later in the passage.

○**E** It explains why it has been challenging to solve the puzzle mentioned earlier in the passage.

Question 12 RC

(Highlighted portion: "Recent studies")

Select one answer choice.

Based on the passage, which of the following can be most plausibly inferred about "Recent studies"?

○**A** Their findings are questionable because some of the behaviors investigated may depend on plant quality.

○**B** They were most likely conducted outside of the two regions mentioned at the beginning of the passage.

○**C** Their results show that associations between ant species and aphid species are usually temporary.

○**D** They were conducted only on aphid species that were known to be obligate myrmecophiles.

○**E** They have produced some data that may be construed as evidence for the plant permissive hypothesis.

Section 2 15 Questions · 23 Minutes

Question 1 TC 1빈칸

For the blank, select the entry that best completes the text.

Ronald Ferguson, whose work is widely admired by policy makers, has never been profiled by the news media, perhaps because his views are _____ and therefore difficult to capture in a sound bite.

- ○**A** nuanced
- ○**B** controversial
- ○**C** empirical
- ○**D** influential
- ○**E** unorthodox

Question 2 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

At its best, the storytelling in this television series manages to accommodate a sense of historical (i) _____. The narrative shows that American independence was not (ii) _____. It was debated. It didn't happen overnight. No one was sure how it would turn out.

Blank (i)	Blank (ii)
contingency	inevitable
plausibility	unforeseen
constancy	unremarkable

Question 3 TC 2빈칸

For each blank, select one entry from the corresponding column of choices.

Some academic criticism of popular novels has been (i) _____ in character, being based on the assumption that the wider the appeal, the more (ii) _____ the novel.

Blank (i)	Blank (ii)
rigorous	undesirable
exculpatory	accomplished
elitist	comprehensible

Question 4 TC 3빈칸

For each blank, select one entry from the corresponding column of choices.

Conventionally, the ultimate measure of a scientific work's validity is how broadly and confidently its conclusions become accepted in the relevant field, which in turn (i) _____ the extent to which its findings are replicated and extended. However, establishing such validity, especially for a novel experimental finding, can take years, and what (ii) _____ replication or extension may be (iii) _____ for some time.

Blank (i)	Blank (ii)	Blank (iii)
derives from	justifies	evident
works against	impugns	disputed
leads to	constitutes	touted

Questions 5 to 6 are based on the following passage.

Scholars hotly debate the date of the first decorative use of copper in the manufacture of Korean celadon ceramics. Some authorities argue that because one of the earliest examples featuring such decoration, a lotus-shaped ewer, was excavated from a tomb dated to 1257, the use of the technique in Korea probably dates from the 1200s. Other authorities contend this ewer instead dates to the previous century, citing the similarity of its incised lotus-petals to other surviving pieces of that era. They maintain that the ewer must have been old—perhaps a treasured antique—when it was buried. Either dating of the method's introduction would support scholars' claims that copper was used in decorating ceramics in Korea before it was used in China.

Question 5 RC 복수

(Highlighted portion: "Other authorities")

Consider each of the choices separately and select all that apply.

According to the passage, which of the following details regarding the lotus-shaped ewer supports the claim of the "other authorities" about the dating of that ewer?

- ☐ **A** The style of the ewer's incised lotus petals
- ☐ **B** The location at which the ewer was found
- ☐ **C** The ewer's distinctive shape

Question 6 RC

Select one answer choice.

The primary function of the highlighted sentence is to

- ○ **A** emphasize the long-standing tradition of crafting decorative ceramics in Korea
- ○ **B** emphasize the high esteem placed upon antique ceramics in Korea during the 1200s
- ○ **C** present concrete evidence that discredits one view regarding the age of the ewer
- ○ **D** provide a rationale in support of an earlier dating for the ewer
- ○ **E** compare early uses of copper-decorated ceramics in Korea to later uses

Questions 7 to 9 are based on the following passage.

Astronomers who study planet formation once believed that comets—because they remain mostly in the distant Oort cloud, where temperatures are close to absolute zero—must be pristine relics of the material that formed the outer planets. The conceptual shift away from seeing comets as pristine relics began in the 1970s, when laboratory simulations revealed there was sufficient ultraviolet radiation reaching comets to darken their surfaces and there were sufficient cosmic rays to alter chemical bonds or even molecular structure near the surface. Nevertheless, astronomers still believed that when a comet approached the Sun—where they could study it—the Sun's intense heat would remove the corrupted surface layer, exposing the interior. About the same time, though, scientists realized comets might contain decaying radioactive isotopes that could have warmed cometary interiors to temperatures that caused the interiors to evolve.

Question 7 RC 복수

Consider each of the choices separately and select all that apply.

According to the passage, astronomers' belief that comets are pristine relics was

- ☐ **A** overturned by analysis of what happens when comets approach the Sun
- ☐ **B** supported by what observations revealed about the composition of the outer planets
- ☐ **C** based on consideration of the conditions that prevail where comets are located

Question 8 RC

(Highlighted portion: "About the same time, though, scientists realized comets might contain decaying radioactive isotopes that could have warmed cometary interior")

Select one answer choice.

The author suggests that the realization described in the final sentence of the passage had which of the following effects?

- ○ **A** It introduced a new topic for study by astronomers interested in planetary formation.
- ○ **B** It led astronomers to adopt a number of different strategies in trying to determine the composition of cometary interiors.
- ○ **C** It called into question an assumption that astronomers had made about comets.
- ○ **D** It cast doubt on astronomers' ability to study the interior parts of comets.
- ○ **E** It caused astronomers to revise their account of the composition of the outer planets

Question 9 RC 복수

(Highlighted portion: "laboratory simulations")

Consider each of the choices separately and select all that apply.

It can be inferred that the author would agree with which of the following statements about the "laboratory simulations"?

- ☐ **A** The simulations showed that despite the low temperatures in the Oort cloud, there was sufficient energy there to alter comet.
- ☐ **B** Astronomers were initially reluctant to accept what simulation showed about the composition of comets.
- ☐ **C** The simulations themselves did not eliminate the possibility that comets contain pristine relics of material from the early solar system.

Question 10 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Scholars of the civil rights movement have often characterized it as springing from social, political, and economic structures _____ the South, thus overlooking the tradition of civil rights activism in other regions of the country.

- ☐ **A** originating in
- ☐ **B** imposed on
- ☐ **C** perpetuated by
- ☐ **D** unique to
- ☐ **E** characteristic of
- ☐ **F** detrimental to

Question 11 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

Though Fine leavens her work with humor and playfulness, she can be _____ writer, mincing no words in her judgments of other scientists' work.

- ☐ **A** an acerbic
- ☐ **B** a provocative
- ☐ **C** an ingratiating
- ☐ **D** a demanding
- ☐ **E** an obsequious
- ☐ **F** a harsh

Question 12 SE

Select the two answer choices that produce completed sentences that are alike in meaning.

In owls with a facial disk, the ears are hidden behind it and are _____ placed: having one higher than the other allows the birds to locate prey both horizontally and vertically for more accurate detection.

- ☐ **A** advantageously
- ☐ **B** asymmetrically
- ☐ **C** unevenly
- ☐ **D** unobtrusively
- ☐ **E** discreetly
- ☐ **F** precisely

Question 13 is based on the following passage.

Most Oakville residents want a community swimming pool to be built but do not want to finance it with local tax revenues. Oakville's mayor argues that although the town has no financial reserves, building a pool will not lead to higher taxes, since an unused town-owned land parcel is available and admission fees will cover the entire cost of operating the pool as well as repayment of the $3 million debt for construction.

Question 13 CR

Select one answer choice.

Which of the following, if true, most seriously weakens the mayor's argument?

○**A** Admission to the community pool will cost most residents who frequently use it more than they would have paid in increased taxes for a pool open to all residents free of charge.

○**B** Because of the types of accidents that can happen in and around swimming pools, the largest part of the operating expenses for the community pool will be lifeguards' salaries and liability insurance.

○**C** The operation of a pool would bring increased traffic to the road leading to the site of the proposed pool and would require the town to fund costly road improvements.

○**D** The same survey that established that a majority of Oakville's residents would use a community pool also found that over one-third of the town's residents would have preferred that it be built at a different site.

○**E** Opponents of the pool have not advanced any other proposals for the use of the currently unused town-owned land parcel.

Questions 14 to 15 are based on the following passage.

More appropriate water pricing would promote the treatment and reuse of urban wastewater for agricultural irrigation and also encourage improvements in irrigation efficiency. Treatment and reuse is more expensive than most irrigation-related conservation and efficiency measures but often less expensive than developing new water sources. Wastewater contains nitrogen and phosphorus, which can be pollutants when released to lakes and rivers but are nutrients when applied to farmland. Moreover, unlike many other water sources, treated wastewater will be both an expanding and fairly reliable supply, since urban water use will likely double by 2025. Many large cities located along coastlines currently dump their wastewater, treated or untreated, into the ocean, rendering it unavailable for any other purpose and harming coastal marine life.

Question 14 RC

Select one answer choice.

Which of the following does the author suggest as an incentive to the development of more efficient irrigation?

○**A** Treatment and reuse of urban wastewater

○**B** Revised pricing of water

○**C** Reduced costs for urban wastewater treatment

○**D** Development of new water sources

○**E** Reduced urban water use

Question 15 RC

Select one answer choice.

Which of the following does the author present as generally the most cost-effective way of meeting demand for water for irrigation?

- ○**A** Reducing the amount of water consumed by large cities
- ○**B** Treating wastewater that is currently being dumped
- ○**C** Increasing the efficiency of current irrigation systems
- ○**D** Having new wells drilled
- ○**E** Increasing the efficiency of current wastewater treatment projects
