In the late 1970s, bird populations were found to be declining in India's Bharatpur Bird Sanctuary in Rajasthan. Grazing cattle and buffalo were the suspected culprits: they were entering the preserve in sufficient numbers to disrupt what was believed to be an otherwise balanced ecosystem. Accordingly, grazing was banned in Bharatpur. Yet by the mid-1980s, studies found that bird diversity within the preserve had declined further since the ban, and it continued to plummet. The absence of grazing animals, it turns out, had disturbed the park's ecology. Weed species were taking over wetlands and choking canals, thereby reducing the fish populations that had once attracted so many birds, and avian species then went elsewhere in search of more suitable nesting places.

The passage suggests which of the following about the “fish populations”?

○**A** They were more diverse in the late 1970s than observers recognized at the time.

○**B** They were more adversely affected by the growth of vegetation after the ban on grazing than by avian predation.

○**C** They required a habitat that could not be sustained without measures to limit animal grazing.

○**D** They proliferated following changes to Bharatpur’s ecosystem introduced by the ban on grazing.

○**E** They migrated to habitats that were inhospitable to grazing cattle and buffalo.

Given that ants and aphids are both abundant insect groups that often share the same habitats, that aphids excrete energy-rich honeydew, and that ants aggressively defend resources, it is difficult to understand why so few species of aphid have evolved a close relationship with ants. For example, only a quarter of the aphid species in the Rocky Mountain region are attended by ants, and in Central Europe, about one third are obligate myrmecophiles (animals that closely associate with ants). More than a dozen hypotheses have been proposed to account for the variability in aphid-ant relationships and the low proportion of attended species. First among them is the plant permissive hypothesis, which suggests that host-plant quality plays a critical role in determining the attractiveness of aphids for ants. Both variation in the quality of different hosts or different parts of the same host plant may affect the quality of honeydew, which is either more or less attractive to ants. However, this hypothesis ignores the fact that several species of aphids may feed on the same host plant or even plant organ but have very different degrees of associations with ants and assumes that the quality of phloem sap determines that of the honeydew. Recent studies have found that feeding on woody plant parts is positively associated with ant attendance, whereas mobility, feeding in isolation, and having winged adults are negatively associated with ant attendance.

Scholars hotly debate the date of the first decorative use of copper in the manufacture of Korean celadon ceramics. Some authorities argue that because one of the earliest examples featuring such decoration, a lotus-shaped ewer, was excavated from a tomb dated to 1257, the use of the technique in Korea probably dates from the 1200s. Other authorities contend this ewer instead dates to the previous century, citing the similarity of its incised lotus-petals to other surviving pieces of that era. They maintain that the ewer must have been old—perhaps a treasured antique—when it was buried. Either dating of the method's introduction would support scholars' claims that copper was used in decorating ceramics in Korea before it was used in China.

Astronomers who study planet formation once believed that comets—because they remain mostly in the distant Oort cloud, where temperatures are close to absolute zero—must be pristine relics of the material that formed the outer planets. The conceptual shift away from seeing comets as pristine relics began in the 1970s, when laboratory simulations revealed there was sufficient ultraviolet radiation reaching comets to darken their surfaces and there were sufficient cosmic rays to alter chemical bonds or even molecular structure near the surface. Nevertheless, astronomers still believed that when a comet approached the Sun—where they could study it—the Sun's intense heat would remove the corrupted surface layer, exposing the interior. About the same time, though, scientists realized comets might contain decaying radioactive isotopes that could have warmed cometary interiors to temperatures that caused the interiors to evolve.

The author suggests that the realization described in the final sentence of the passage had which of the following effects?

○**A** It introduced a new topic for study by astronomers interested in planetary formation.

○**B** It led astronomers to adopt a number of different strategies in trying to determine the composition of cometary interiors.

○**C** It called into question an assumption that astronomers had made about comets.

○**D** It cast doubt on astronomers' ability to study the interior parts of comets.

○**E** It caused astronomers to revise their account of the composition of the outer planets

It can be inferred that the author would agree with which of the following statements about the "laboratory simulations"?

☐ **A** The simulations showed that despite the low temperatures in the Oort cloud, there was sufficient energy there to alter comet.

☐ **B** Astronomers were initially reluctant to accept what simulation showed about the composition of comets.

☐ **C** The simulations themselves did not eliminate the possibility that comets contain pristine relics of material from the early solar system.

근거: 'laboratory simulations revealed there was sufficient ultraviolet radiation … to darken their surfaces and … cosmic rays to alter chemical bonds … near the surface'.

A: 절대영도에 가까운 온도에도 혜성을 변화시킬 만한 에너지(자외선, 우주선)가 있었다 → 맞음.

C: 시뮬레이션은 '표면 근처'의 변화만 보여줌 → 내부가 순수할 가능성은 남음(그래서 천문학자들이 Nevertheless 내부는 순수하다고 믿음) → 맞음.

B: 천문학자들이 처음에 수용을 꺼렸다는 근거 없음.

정답: A, C

⚠ **함정 / 오답 포인트**

B: 'Nevertheless, astronomers still believed'를 보고 시뮬레이션 결과를 거부했다고 착각하기 쉬움. 실제로는 표면 변화는 받아들이고 내부만 순수하다고 본 것.

Scholars of the civil rights movement have often characterized it as springing from social, political, and economic structures _____ the South, thus overlooking the tradition of civil rights activism in other regions of the country.

- ☐ **A** originating in
- ☐ **B** imposed on
- ☐ **C** perpetuated by
- ☐ **D** unique to
- ☐ **E** characteristic of
- ☐ **F** detrimental to

해설
단서: 'thus overlooking the tradition of civil rights activism in other regions' → 학자들은 민권운동이 남부에만 있는 구조에서 생겼다고 봄.
빈칸 = 남부 특유의.
unique to / characteristic of = ~에 고유한, ~ 특유의.
정답: D, E

⚠ **함정 / 오답 포인트**
originating in(~에서 기원한)은 그럴듯하지만 '다른 지역을 간과'하는 결과를 만들려면 남부'만의' 구조라는 배타성이 필요.
imposed on/detrimental to는 근거 없음.

단어
originating in ~에서 비롯된 · **imposed on** ~에 강요된 · **perpetuated by** ~에 의해 지속된 · **unique to** ~에 고유한 · **characteristic of** ~ 특유의, 전형적인 · **detrimental to** ~에 해로운

- ☐ **A** an acerbic
- ☐ **B** a provocative
- ☐ **C** an ingratiating
- ☐ **D** a demanding
- ☐ **E** an obsequious
- ☐ **F** a harsh

해설
단서: Though(대조) 유머와 장난기로 작품을 부드럽게 하지만 → 반대로 신랄할 수 있음. 'mincing no words(말을 가리지 않고)' 다른 과학자의 연구를 평가.
빈칸 = 신랄한, 가혹한.
acerbic / harsh.
정답: A, F

⚠ **함정 / 오답 포인트**
provocative(도발적인)도 끌리지만 짝이 없고 '말을 가리지 않는 판단'의 핵심은 가혹함. demanding도 짝 없음.

단어
an acerbic 신랄한 · **a provocative** 도발적인 · **an ingratiating** 환심을 사려는 · **a demanding** 요구가 많은, 까다로운 · **an obsequious** 아첨하는 · **a harsh** 가혹한, 거친

advantageously: 위치 덕분에 먹이를 더 정확히 탐지하므로 '유리하게'도 맞아 보이지만 짝이 없음.
unobtrusively/discreetly는 'hidden'에 끌린 함정.

단어
advantageously 유리하게 · **asymmetrically** 비대칭적으로 · **unevenly** 고르지 않게 · **unobtrusively** 눈에 띄지 않게 · **discreetly** 신중하게, 눈에 띄지 않게 · **precisely** 정확하게

Most Oakville residents want a community swimming pool to be built but do not want to finance it with local tax revenues. Oakville's mayor argues that although the town has no financial reserves, building a pool will not lead to higher taxes, since an unused town-owned land parcel is available and admission fees will cover the entire cost of operating the pool as well as repayment of the $3 million debt for construction.

S2-13 정답: C CR 난이도 ●●●○○ verbal226 Q13 · 24년 3월, 22년 8월 중국후기

Select one answer choice.

Which of the following, if true, most seriously weakens the mayor's argument?

○**A** Admission to the community pool will cost most residents who frequently use it more than they would have paid in increased taxes for a pool open to all residents free of charge.

○**B** Because of the types of accidents that can happen in and around swimming pools, the largest part of the operating expenses for the community pool will be lifeguards' salaries and liability insurance.

○**C** The operation of a pool would bring increased traffic to the road leading to the site of the proposed pool and would require the town to fund costly road improvements.

○**D** The same survey that established that a majority of Oakville's residents would use a community pool also found that over one-third of the town's residents would have preferred that it be built at a different site.

○**E** Opponents of the pool have not advanced any other proposals for the use of the currently unused town-owned land parcel.

More appropriate water pricing would promote the treatment and reuse of urban wastewater for agricultural irrigation and also encourage improvements in irrigation efficiency. Treatment and reuse is more expensive than most irrigation-related conservation and efficiency measures but often less expensive than developing new water sources. Wastewater contains nitrogen and phosphorus, which can be pollutants when released to lakes and rivers but are nutrients when applied to farmland. Moreover, unlike many other water sources, treated wastewater will be both an expanding and fairly reliable supply, since urban water use will likely double by 2025. Many large cities located along coastlines currently dump their wastewater, treated or untreated, into the ocean, rendering it unavailable for any other purpose and harming coastal marine life.
