Biologists generally agree that birds and dinosaurs are somehow related to one another. The agreement ends there. Hypotheses regarding dinosaurian and avian evolution are unusually diverse—and often at odds with one another. Confusion consequently reigns over a broad spectrum of unanswered questions dealing with avian origins and the biology of dinosaurs and early birds. This confusion has been exacerbated by a paucity of serious attempts to synthesize and evaluate available data on the details of avian and dinosaurian evolution. Too often, the job of summarizing current knowledge of these subjects has fallen to well-meaning but naïve lay authors or reporters. Consequently, both the public and the scientific community have often been misled by widespread dissemination of sensational but weakly founded hypotheses.

In the shallow end of Lake Tomwa, there are remains of numerous Jeffery pine trees that grew there during a lengthy drought. Researchers had believed that this drought lasted at least 150 years, but carbon dating reveals that pines were growing in the lake bed for only 120 years, from 1200 until 1320. Since the Jeffrey pines, which cannot survive in water, must have died at the end of the drought, the dating shows that the drought lasted less than 150 years.

Some historians have recently challenged the “party period paradigm,” the view, advanced by McCormick and others, that political parties—especially the two major parties—in the United States between the years 1835 and 1900 evoked extraordinary loyalty from voters and dominated political life. Voss-Hubbard cites the frequency of third-party eruptions during the period as evidence of popular antipathy to the two-party regime. He correctly credits third parties with helping generate the nineteenth-century’s historically high rates of voter turnout by forcing major parties to bolster supporters’ allegiance, lest minor parties siphon off their votes, and with pushing policy demands that the major parties ignored. Formisano stresses the pervasive record of nonpartisan and antiparty governance at the local level, and women’s frequent participation in nineteenth-century public life, prior to their enfranchisement, in nonpartisan and antiparty ways as evidence of the limitations of the party period paradigm. Yet McCormick would deny that the existence of antiparty sentiment during the period undermines the paradigm, since he has always acknowledged the residual strength of such sentiment during the nineteenth century. In any case, the strength of the paradigm is its comparative thrust: the contrast it draws between the period in question and later political eras.

Using radar instruments to analyze the exact nature of geological features on Saturn's moon Titan is challenging, because radar images are unlike ordinary photographs. With radar, the brightness of the reflected signal correlates with the roughness of the surface. Thus, the smooth surfaces of Titan's methane-filled lakes look dark in radar images, while bright areas usually suggest rough hilly terrain. However, the data don't always follow this pattern. Many detected river valleys and lakes appear bright compared to the surrounding terrain, suggesting a generally dry riverbed or lake bed filled with gravel or cobble. As for the dark, meandering river valleys, one theory proposes that they are deeply incised bedrock channels whose steep walls shadow the signal, making the radar images appear dark.

During the 1920s, most advocates of scientific management, Frederick Taylor`s method for maximizing workers' productivity by rigorously routinizing their jobs, opposed the five-day workweek. Although scientific managers conceded that reducing hours might provide an incentive to workers, in practice they more often used pay differentials to encourage higher productivity. Those reformers who wished to embrace both scientific management and reduced hours had to make a largely negative case, portraying the latter as an antidote to the rigors of the former.

In contrast to the scientific managers, Henry Ford claimed that shorter hours led to greater productivity and profits. However, few employers matched either Ford's vision or his specific interest in mass marketing a product—automobiles—that required leisure for its use, and few unions succeeded in securing shorter hours through bargaining. At its 1928 convention, the American Federation of Labor (AFL) boasted of approximately 165,000 members working five-day, 40-hour weeks. But although this represented an increase of about 75,000 since 1926, about 70 percent of the total came from five extremely well-organized building trades' unions.

It can be inferred that the author of the passage mentions “automobiles” primarily to suggest that

○**A** Ford’s business produced greater profits than did businesses requiring a workweek longer than five days

○**B** Ford, unlike most other employers, encouraged his employees to use the products they produced

○**C** Ford may have advocated shorter hours because of the particular nature of his business

○**D** unions were more likely to negotiate for shorter hours in some businesses than in others

○**E** automobile workers’ unions were more effective than other unions in securing a five-day workweek

It can be inferred that the author of the passage would probably agree with which of the following claims about the boast referred to in the second paragraph?

○**A** It is based on a mistaken estimation of the number of AFL workers who were allowed to work a five-day, 40-hour week in 1928.

○**B** It could create a mistaken impression regarding the number of unions obtaining a five-day, 40-hour week during the 1920s.

○**C** It exaggerates the extent of the increase between 1926 and 1928 in AFL members working a five-day, 40-hour week.

○**D** It overestimates the bargaining prowess of the AFL building trades' unions during the 1920s.

○**E** It is based on an overestimation of the number of union members in the AFL in 1928.

When rats are placed under conditions of stress, their adrenal glands immediately increase production of the hormone corticosterone, and soon thereafter the rats' white blood cell count drops substantially. Yet rats without functioning adrenal glands experience little decrease in white blood cell count when placed under conditions of stress. It is likely, therefore, that an increase in corticosterone produced by a rat's adrenal glands causes the rat's white blood cell count to decrease.

○**A** Whether the drop in white blood cell count that occurs in rats under conditions of stress is sufficient to make the rats more susceptible to diseases that white blood cells normally combat.

○**B** Whether normal white blood cell counts vary widely among healthy rats that are not under conditions of stress.

○**C** Whether the adrenal glands of rats that are under conditions of stress increase production of any hormone other than corticosterone.

Bat studies in Indiana between 1961 and 1993 recorded bat roost locations. All of the roosts of evening bats were in buildings. Consequently, the fact that all evening bats radio-tracked since 1993 have roosted in trees was notable. The building roosts may have been the result of spillover from large populations of evening bats in the woods along rivers, where, prior to 1993, scientific data were not collected. The building roosts may also indicate that this species had adapted well to human structures. However, the disappearance after 1993 of previously known roosts in buildings suggests that this adaptation became less successful. Big brown bat populations have been increasing in Indiana, and perhaps evening bats do not compete successfully with them for roosts in buildings.

The author mentions the fact that evening bats radio-tracked since 1993 have roosted in trees primarily in order to

○**A** account for a puzzling aspect of evening bat behavior mentioned earlier in the passage

○**B** introduce evidence that indicates a change in evening bat behavior discussed later in the passage.

○**C** undermine a theory about evening bat behavior presented earlier in the passage

○**D** provide a contrast between evening bat behavior and big brown bat behavior

○**E** provide an example of evening bat behavior that fits well-established scientific views of the species
